Our production plan

Produce & prepare the product.

Gardening and enterprise
Resilience & Change

The offer and a trial part

Check the actual chosen offer and the materials available.

Try one safe label, care-card or agreed component.

Use the trial to improve the production plan.

A clean empty-pot mockup stays labelled as a mockup.

Our production sequence

Stage	What the plan needs
Adult checks	Permission, suitable materials and clear safe roles.
Prepare	Clean space and one sample component.
Make	Ordered small jobs with role codes and resources.
Check and store	Quality result, safe storage and care if needed.

Agree the sequence before starting a batch.

Our hygiene and safety brief

Keep the table and routes clear. Use checked blunt tools.

Keep plant work separate from food and wash hands.

Stop and ask the adult about damage or anything unknown.

Choose a non-contact role whenever helpful.

A production decision

A draft says water every day. The adult has not checked it.

A Copy it because all plants need the same care.

B Hold the advice and ask the adult to check it.

The actual plant needs accurate care instructions.

Our actual production plan

Decision	Actual plan or check
Offer and quantity	What ____ Planned number ____
Roles and kit	Materials ____ Role codes ____ Backup ____
Order and safety	Jobs ____ Hygiene and adult checks ____
Next check	Criteria ____ Unresolved check ____

Unknown resources and permissions stay to check.

My preparation evidence

My production job is ____;

I will keep it safe by ____.

Record a real sample part, plan decision or safety check.

Review and next step

Read back the order, roles and any checks still needed.

Store the trial part and materials safely.

Clear the space and wash hands after plant work.

Next session: making and checking the approved offer.
