Knowledge for making and checking

White standard edition

Produce & prepare the product.

A production plan

A production plan turns the chosen offer into ordered jobs. Agree the actual quantity, materials, available time, role codes and quality criteria before making. Check resources rather than assuming they exist.

Try one part first

Make a trial label or care-card part and check it. For the invented starter-plant-pot model, readable labels and accurate advice matter. The adult confirms the actual plant and advice. A trial or mockup does not prove a whole offer is finished.

Clean work and safe jobs

Keep clean paper work separate from soil work. Wash before clean work and after plant, pot or soil contact. Cover cuts and use suitable gloves for soil. Stop for unclear instructions, damage or spills. The adult checks tools, materials and permission.

Knowledge for making and checking continued

White standard edition

Invented model only

Offer: a labelled starter-plant pot with a care card.
Customer type: a beginner grower.
Useful need: clear care instructions.

Possible jobs and checks

Adult confirms actual materials, suitable plant and care advice.
Prepare a readable generic label and care-card part.
Assemble approved parts safely.
Check the actual work and correct readable errors.
Keep held work apart; adult records any future release.

This is an invented example, not actual stock or pupil work. Make and count only what is really available and completed. A service offer needs its own agreed safe task and quality criteria.
