Knowledge organiser (BASE) — Test, check and adjust the panel

Pathway: BASE · Week 5 Part 2 · Big question: How can we test our relief panel layout and make one part stronger?

Core studio focus

Family: Studio suite

Big question: How can we test our relief panel layout and make one part stronger?

• Lay your cut card. Foil pieces onto your dark base board using your Week 4 plan.

• Step back two paces to check if the main shape stands out.

• Make one clear change to fix a weak edge or boost dark. Light.

Essential vocabulary

• test layout: Placing cut pieces on the board. First gluing to see how they look.

• adjust: To move or change one piece so the whole picture looks better.

• dark and light: Big difference between dark base card and bright chrome foil.

• overlap: When one card strip crosses right over the top of another.

• strong: Clear to see and firmly built.

Three-step studio method

Step 1: Lay out the pieces dry: I cut my main arch. Tall bars and lay them on my dark board without glue.

Step 2: Do the two-pace step-back check: I take two steps back. Notice two dark bars look too close fast.

Step 3: Adjust and glue Layer 1 and 2: I widen the gap, add a bright foil cross-beam for dark. Light, and glue the main layers down.
