Pupil studio resources & worksheet — Test, check and adjust the panel

Pathway: BASE · Week 5 Part 2 · Big question: How can we test our relief panel layout and make one part stronger?

Arrival check

Look at your Week 4 plan sheet. Which pieces go down on your base board first?

[ ] The big bottom tall bar or arch shapes (Layer 1)

[ ] The tiny bolt dots on the very top

[ ] The label words

Starter visual cues

Layout 1: Black card bars on a black base board — hard to see from far away.

Step-back check: The maker steps back. Spots that the arch blends into the dark back space.

One change: The maker adds a strip of bright pressed foil along the arch.

Layout 2: Now the chrome arch pops out clearly against the dark board.

Vote: Why is it smart to step back two paces. First you glue all your pieces down?

Studio practice planner

Pick your check focus and the change you will make on your panel.

Shapes/Focus: Widen beam spacing, Raise the centre arch, Straighten side tall bars, Lock slanted struts

Tools/Methods: Add shiny foil strip, Dry-brush chrome edge, Add pale backing trim, Add pressed bolt plate

Exit ticket

When is the easiest time to move a card piece if it looks crooked?

[ ] During the dry layout check. First you put glue on it

[ ] Next week after the glue is rock hard

[ ] Never check your work
