Teacher and cover plan — Test, check and adjust the panel

Pathway: BASE · Week 5 Part 2 · Big question: How can we test our relief panel layout and make one part stronger?

Learning goals and studio kit

• Lay your cut card. Foil pieces onto your dark base board using your Week 4 plan.

• Step back two paces to check if the main shape stands out.

• Make one clear change to fix a weak edge or boost dark. Light.

Studio kit: Week 4 plan sheets, stiff dark base boards, ridged card, smooth card, pressed foil pieces, glue spreaders, white chalk/chrome pens

Arrival and starter

Arrival: Look at your Week 4 plan sheet. Which pieces go down on your base board first?

Starter question: Why is it smart to step back two paces. First you glue all your pieces down?

Teacher model (I do)

Step 1: Lay out the pieces dry: I cut my main arch. Tall bars and lay them on my dark board without glue.

Step 2: Do the two-pace step-back check: I take two steps back. Notice two dark bars look too close fast.

Step 3: Adjust and glue Layer 1 and 2: I widen the gap, add a bright foil cross-beam for dark. Light, and glue the main layers down.

Practice routes (Supported / Independent / Aspire)

Supported: Layout checked from two steps back, foil dark. Light added, and main layers glued.

Independent: Dry layout tested, one change recorded on the plan,. Layers bonded.

Aspire: Three-layer frame tested, refined, bonded, and labelled.

TA and cover notes

TA focus: Mark a tape line on the floor two paces back from the display easel so pupils have a clear spot to stand for their step-back check.

Staff prep: Staff preparation only: review a short clip on running a two-pace dry-layout check. First bonding cardboard relief pieces.
