Knowledge organiser (BASE) — Resolve and finish the relief artwork

Pathway: BASE · Week 6 Part 2 · Big question: How do we add top details and a neat border to finish our relief panel?

Core studio focus

Family: Studio suite

Big question: How do we add top details and a neat border to finish our relief panel?

• Glue down your final top details (Layer 3 cross-bars. Bolt dots).

• Add chrome or chalk bright lines across the highest bumps.

• Frame your finished panel on a clean backing card.

Essential vocabulary

• resolve: To finish all last details so the artwork feels full.

• bright line: Bright chrome or white marks on the highest raised edges.

• bolt dot: A small round bolt dot glued on a beam corner.

• frame: A clean border card behind your panel that makes it look sharp.

• full: All layers stuck firm and ready for the wall.

Three-step studio method

Step 1: Check and add Layer 3 bolt dots: I glue four small round card bolt dots onto the corners where my arch meets the tall bars.

Step 2: Skim bright lines on top edges: I drag a dry chrome brush lightly across the bolt dots. Ridges so they catch the light.

Step 3: Centre on the backing frame: I glue the back of my stiff panel onto a slightly larger black mount card for a neat border.
