Staff answers & diagnostic guide — Technique studio tasters

Pathway: TRACK · Week 1 Part 1 · Big question: How do four studio media change the mood and contrast of the same identity motif?

Starter answer & explanation

Question: Why do studio artists test the same motif across all four media before starting a final piece?

Correct: Keeping the motif constant lets you compare how each medium affects contrast, edge quality, and mood — Spot on. A fair comparative test reveals which medium best suits your design.

Guided team check (We do) answers

Q1: How do you shift an ink wash from dark tone to light tone on your sheet? -> Add more clean water to the brush on the palette between strokes (Correct. Diluting the ink step by step creates a smooth light wash.)

Q2: What is the visual difference between a torn collage edge and a scissor-cut collage edge? -> A torn edge looks soft and organic with white paper fibres; a cut edge is crisp and geometric (Yes. You can combine both edge types to contrast rough texture with sharp lines.)

Q3: How do you prevent dry chalk pastel in Panel 3 from smudging across the rest of your sheet? -> Tap off loose dust gently, never blow it, and lay a clean barrier sheet over finished panels (Correct. Tapping dust onto a damp towel and using a cover sheet keeps work clean.)

Exit check answer

Question: Which studio technique uses water dilution to create lighter translucent grey tones from black ink?

Correct: An ink wash — Correct. Adding water to ink creates translucent tonal washes.
