Knowledge organiser (SUMMIT) — Three studio goals and baseline audit

Pathway: SUMMIT · Week 1 Part 1 · Big question: How do we audit our current studio skills across four visual disciplines to set three measurable targets?

Core studio focus

Family: Identity and studio log

Big question: How do we audit our current studio skills across four visual disciplines to set three measurable targets?

• Execute a four-part baseline visual audit testing observational contour, five-value tonal gradation, ink wash control, and surface collage.

• Evaluate each baseline study honestly against studio criteria (precision, tonal range, and edge control).

• Formulate three specific, measurable studio development targets for the seven-week unit.

Essential vocabulary

• baseline audit: An honest practical test of your current studio strengths and gaps at the start of a project.

• tonal value: The exact degree of lightness or darkness on a scale from pure white to deep black.

• contour: A perceptive line that tracks both the outer boundary and internal form of an object.

• criterion: A specific standard used to judge technical quality in artwork.

• target: A concrete, testable skill goal you commit to developing over the unit.

Three-step studio method

Step 1: Complete the four timed baseline quadrants: I spend four focused minutes on each quadrant: contour weight, 5-step graphite tone, ink wash gradation, and collage balance.

Step 2: Score and diagnose each quadrant: I assess each quadrant against edge clarity and tonal range, noting that my wet ink wash jumped too abruptly from dark to light.

Step 3: Draft three measurable studio targets: I write three SMART studio targets on my log sheet: one for wet tonal control, one for line weight, and one for compositional depth.
