Staff answers & diagnostic guide — Three studio goals and baseline audit

Pathway: SUMMIT · Week 1 Part 1 · Big question: How do we audit our current studio skills across four visual disciplines to set three measurable targets?

Starter answer & explanation

Question: What makes a studio development target genuinely 'measurable' rather than vague?

Correct: It names the specific medium, the technical control skill, and the visual evidence you will produce (e.g. 'Control 5 tonal values in diluted ink without tide marks') — Exactly! A measurable target tells you what to practise and how to judge success.

Guided team check (We do) answers

Q1: Why should you resist the urge to hide or throw away the quadrant you found hardest during today's audit? -> That weakest quadrant is your highest-value diagnostic evidence and justifies your #1 development target (Yes! Showing an honest gap in Week 1 and mastering it in Week 2-4 is top-tier portfolio practice.)

Q2: Which of these is the strongest studio target for a portfolio log? -> Achieve smooth three-value transitions in diluted ink wash by controlling brush water load across three timed

studies (Spot on. It names the medium, the technical focus, and how it will be tested.)

Q3: How do the four quadrants on your audit board connect to the rest of this seven-week unit? -> They become the benchmark you compare against in Week 2 (deliberate practice), Week 4 (refinement), and Week 7 (review) (Correct. Your Week 1 audit anchors the entire portfolio arc.)

Exit check answer

Question: What are the three ingredients of a strong, measurable studio development target?

Correct: The specific medium, the technical control skill, and the visual evidence you will produce — Correct. Specificity makes your target actionable and verifiable.
