Teacher and cover plan — Creative practice, studio roles and pathways

Pathway: SUMMIT · Week 2 Part 2 · Big question: How do interdisciplinary creative groups take a structural commission from studio prototype to public installation?

Learning goals and studio kit

• Examine the professional ecosystem connecting lead artists, structural engineers, specialist fabricators, and curators.

• Analyse how material specifications, structural load, and surface finishes are tested in studio workshops.

• Produce a Studio practice & Pathways board combining role analysis with a technical joint/surface prototype.

Studio kit: Creative industry case-study cards, A3 Studio practice boards, greyboard strips, craft foil, fineliners, metallic markers, PVA glue

Arrival and starter

Arrival: When a major public structure or gallery installation is built, how many different creative and technical careers are involved behind the scenes?

Starter question: Why must a Lead artist and a Specialist fabricator share physical material prototypes (swatches and joint models) rather than only emails?

Teacher model (I do)

Step 1: Map the commission workflow across roles: I annotate the studio workflow diagram showing how my Week 1 brief moves from Designer to Engineer, Fabricator, and Curator.

Step 2: Build a physical joint & patina prototype: I construct a 8 cm structural corner joint using laminated card, a slotted gusset plate, embossed foil rivets, and dark iron wash.

Step 3: Write the technical specification note: Beside my mounted prototype, I write the exact fabrication spec (layer thicknesses, bond method, and 3-value patina sequence).

Practice routes (Supported / Independent / Aspire)

Supported: Workflow map completed, corner-joint prototype mounted, and personal role strength identified.

Independent: Role analysis, mounted 3-level joint prototype, formal fabrication spec, and reflective link.

Aspire: Two comparative joinery prototypes tested, specified, and linked to creative industry pathways.

TA and cover notes

TA focus: Have pre-cut greyboard strips and triangle gusset blanks ready so pupils can construct a crisp 8 cm structural joint prototype alongside their career map.

Staff prep: Staff preparation only: review how to link classroom relief construction to creative careers in architecture,

fabrication, set design, and curation.
