Muscle Pairs · Staff Answers

Learning goal: I can find a pair of arm muscles and show which muscle pulls to bend or make the arm straight.

Arrival Answers

1. Box 1 shows the top muscle.
2. They meet at a joint.
3. No. A muscle must pull it.
4. Yes. You can ask or pass.

Starter & Hinge Answers

Starter: A. Muscles only pull, so we need a pair to pull the bone each way.

Hinge: A. The top muscle pulls the lower arm bone up while the back muscle rests.

Evidence Desk Cards

Lift a cup up: Top muscle pulls: it gets short and lifts the forearm.

Reach straight down: Back muscle pulls: it straightens the arm.

Back muscle during a lift: Partner muscle rests: it goes soft and long.

Top muscle when straight: Partner muscle rests: it lets the arm straighten.

Push a bone back: Not how muscles work: muscles can only pull.

Pull azip up: Top muscle pulls: it bends the elbow joint.

Check & Repair Answer

Muscles cannot push. A second muscle on the back of the arm pulls it straight.

Exit Ticket Answers

1. Top muscle. 2. It relaxes (goes soft and long). 3. Because muscles can only pull and never push.
