Muscle Model · Tier Pack · Aspire

Learning goal: I can test a card and string arm model to show how two muscles pull a joint.

Aspire Route (Book First)

Explain one way the card model is like a real arm and one way a real muscle is different from a string.

Help: Both only pull in pairs, but a real muscle gets short by itself while a string needs __.

Optional Make It · Aspire

Make a model evaluation slip

Write one strength and one limit of the card-and-string arm model on a review slip and stick it in your book.

Word Help

model: a simple copy we use to test how something works

hinge: a joint that bends and straightens like a door

string: the part in our model that acts like a muscle

card strip: the stiff part in our model that acts like a bone

Exit Check

What body part does the string stand for: bone or muscle?

What happened when you pulled String A while String B stayed loose?

Made by Matt

Name one thing a real muscle does that a piece of string cannot do by itself.
