Body Needs · Teacher and Cover Plan

Learning goal: I can say how animals get food and match food to three jobs in the body.

Scheme Outcome

BASE Science scheme of work, Unit 1 (Skeletons, Muscles and Nutrition), Topic: Identify that animals, including humans, need the right types and amount of nutrition, and cannot make their own food.

Explain why animals must eat food and drink water, and match the three main jobs food does for the body (energy, growth and repair, staying well).

Success Criteria

I can say that plants make food using light, while animals must eat.

I can name the three jobs food does: go (energy), grow, and keep well.

I can explain why our body also needs water every day.

Model Sequence (I do)

First, compare plants and animals. Green plants use light to make their own food.

Animals cannot do this. Humans, dogs, and birds must eat food to live.

Food does three big jobs: Go (energy to move), Grow (build and mend), and Keep well.

One single food cannot do all three jobs well on its own.

Made by Matt

If we only ate energy food, our body would still need foods to grow and keep well.

We also need water every day so our blood and body parts can work.

We Do & Hinge Check

Which job of food helps your body build strong muscles and mend a cut?

Answer: A. Grow and mend foods build and repair muscles, bones, and skin.

Safe Practical & Card Setup

Sort the body-need cards onto the Go, Grow, and Keep Well mats.

Kit: Printed food and body-job cards (no real food handling needed), three job mats, and word strips.

Use printed picture cards only; never taste or share items in a science task.

You Do Routes (Supported, Independent, Aspire)

Supported: Match Go, Grow, and Keep well to (run and move, build muscle, stay healthy). (Help: Go = move. Grow = build and mend. Keep well = fruit, veg, and water.)

Independent: Match each of the three food jobs (Go, Grow, Keep well) to what it does for the body and give one food example for each. (Help: __ foods give us __ so our body can __.)

Aspire: Explain why eating only one kind of food is

not enough for the human body. (Help: One food cannot do all three jobs, so the body would miss out on __ or __.)
