Balanced Plate · Teacher and Cover Plan

Learning goal: I can use a plate guide to see which food groups take up the most space.

Scheme Outcome

BASE Science scheme of work, Unit 1 (Skeletons, Muscles and Nutrition), Topic: Use a balanced plate guide to see how much of each food group we need across the day.

Identify the main sections of a balanced plate guide and explain why fruit, vegetables, and starchy foods take up the biggest spaces.

Success Criteria

I can point to the two biggest parts on the plate guide.

I can match foods to fruit and veg, starchy food, protein, and milk or dairy.

I can say why sweets and oils are kept in a tiny space off the main plate.

Model Sequence (I do)

Look at the two biggest spaces first: fruit and veg, and starchy food like rice or bread.

Next, find the medium spaces: protein (beans, egg, fish, meat) and dairy (milk, yoghurt, cheese).

Sweets, crisps, and oils sit in a tiny space because our body only needs a little bit.

You do not have to get every single plate exact at one

sitting.

The plate guide can show what we eat across a whole day of meals and snacks.

We also aim for 6 to 8 cups of water or low-sugar drinks across the day.

We Do & Hinge Check

Which two food groups should take up the largest share of a balanced plate?

Answer: A. Fruit and vegetables and starchy carbohydrates make up over two thirds of the plate guide.

Safe Practical & Card Setup

Sort the food cards onto the sized sections of the Plate Guide mat.

Kit: Printed Plate Guide mats with sized sections, food group cards, and word strips.

Use paper cards on a flat desk. Keep food talk factual and kind for every pupil.

You Do Routes (Supported, Independent, Aspire)

Supported: Match each food group to Big space, Medium space, or Tiny space on your sheet. (Help: Fruit/veg = Big. Starchy = Big. Protein = Medium. Dairy = Medium. Oils = Tiny.)

Independent: Label the sections of the plate guide and write two sentences explaining which groups are biggest and which is smallest. (Help: __ and __ have

the biggest spaces because __, while __ has the smallest space.)

Aspire: Explain why a small snack does not need all five groups if the whole day's meals match the plate guide. (Help: Our body uses food across the whole day, so a fruit snack can add to lunch and dinner to balance the __.)
