The Moon · Tier Pack · Supported

Learning goal: I can explain how the Moon orbits the Earth and why we see different Moon phases.

Supported Route (Book First)

Match New Moon, First Quarter, Full Moon, and Third Quarter to their positions around the Earth and finish the sentence.

Help: Between Sun and Earth = New Moon. Opposite the Sun = Full Moon. One orbit = 28 days.

Optional Make It · Supported

Build the 4-Phase Orbit Mat

Place New Moon, First Quarter, Full Moon, and Third Quarter in the right places on the orbit ring and copy the four names into your book.

Word Help

natural satellite: a body in space, like the Moon, that orbits a planet

reflect: when light from the Sun bounces off the surface of the Moon

phases of the Moon: the changing shapes of the sunlit part of the Moon as seen from Earth

waxing and waning: waxing means the lit part we see is growing; waning means it is shrinking

Exit Check

How many days does the Moon take to orbit the Earth

once?
