Sector map and response guide

Sectors occupations and job families

Tuesday 3 November 2026 · P3 · Year A · GROW · 40 minutes

These are generic authored teaching contexts, not an exclusive industry classification. Accept another plausible workplace context with a task-based reason. No practical job performance is assessed.

Health and care

People in this work area give care and treatment. They need many kinds of job to help the service run.

Card	Occupation	Role description	Task clue
HC1	Care assistant	Frontline	Helps people with agreed care tasks. Tells the team if there is a concern.
HC2	Laboratory technician	Technical	Gets lab kit ready. Follows the steps for each safe task.
HC3	Nurse	Professional	Plans and gives care to people. Uses nursing skills to make care choices.
HC4	Administrator	Support	Keeps records, plans times to meet and passes on messages.
HC5	Care team manager	Management	Plans who will do each care task. Checks the team has the kit it needs.

Education

People in this work area help others to learn. They need teachers and many other jobs to keep the setting working.

Card	Occupation	Role description	Task clue
ED1	Classroom assistant	Frontline	Helps with learning tasks. Shows learners the next step when agreed.
ED2	Science technician	Technical	Gets learning kit ready. Checks it is safe to use.
ED3	Teacher	Professional	Plans what to teach. Explains ideas and checks what learners know.
ED4	Administrator	Support	Keeps the learning setting’s records. Plans times to meet and passes on messages.
ED5	Learning-centre manager	Management	Plans the work, staff time and kit for the learning setting.

The five role types are overlapping descriptions of work, not fixed ranks, entry rules or a progression ladder. A role may have more than one plausible type when the task evidence supports it.

Sector map key continued

Construction

People in this work area build or care for buildings. Many jobs help plan the work and carry it out.

Card	Occupation	Role description	Task clue
CO1	Bricklayer	Frontline	Uses a plan to build a wall. Follows the agreed safe steps.
CO2	Building-services technician	Technical	Checks and cares for the systems in a building. Uses the right kit and safe steps.
CO3	Surveyor	Professional	Looks closely at buildings and sites. Measures them and gives clear advice.
CO4	Administrator	Support	Keeps project records and orders. Passes on messages to the team.
CO5	Site manager	Management	Plans people, kit and tasks on the building site.

Retail

People in this work area sell goods. Many jobs help serve people, care for kit, keep records and plan work.

Card	Occupation	Role description	Task clue
RE1	Checkout assistant	Frontline	Helps people pay for goods. Follows the shop’s sales steps.
RE2	Equipment technician	Technical	Checks the shop’s kit. Keeps it working and tells the team of faults.
RE3	Accountant	Professional	Checks records of money. Explains what the figures show.
RE4	Administrator	Support	Keeps staff records and orders. Passes on messages for the shop.
RE5	Store manager	Management	Plans the shop’s work, staff time and kit.

Cross sector and job family

An administrator could organise records in health and care, education, construction or retail. The workplace sector changes; the occupation and related tasks may remain similar.

A job family groups related occupations by similar work or tasks. It can cross sectors.

Administration: Administrator, Receptionist, Records assistant. Shared tasks: Organise information. Keep accurate records. Pass messages to the right person.

Checks support and evidence

Exact core outcome

I can explain the difference between a sector and an occupation and map roles within at least four sectors.

To claim the core outcome, check the distinction with accurate examples and genuine mapping in all four sectors. One accurate occupation in each sector meets the mapping component. Added role variety, reasons, cross-sector examples and the job-family explanation are recorded separately; do not turn a second occupation per sector into a new core minimum.

Floor answer key

Sector	Correct option and task clue
Health and care	Care assistant. The care assistant supports people with agreed daily care tasks.
Education	Classroom assistant. The classroom assistant supports agreed learning activities.
Construction	Bricklayer. The bricklayer builds walls from a plan.
Retail	Checkout assistant. The checkout assistant helps customers pay for goods.

HC: Care assistant; ED: Classroom assistant; CO: Bricklayer; RE: Checkout assistant. Four accurate choices can contribute four-sector mapping evidence. Check the sector/occupation distinction separately before claiming the exact core outcome. Record role-type variety, cross-sector work, job family and reasons separately; do not infer them from the four matches.

Simplified word checks: retail is a sector and administrator an occupation; education is a sector and teacher an occupation. Record the learner's own explanation or meaningful word choice, and any answer prompt, rather than a copied adult definition.

Hinge and parallel check

Private individual check during guided analysis: a retail organisation has an administrator who keeps staff records. Which is the sector: retail or administrator? Expected: retail is the sector, administrator the occupation. Ask for the task clue. If unsure, use the prompt ladder and model only the first distinction. Parallel check: an education setting has a technician who prepares equipment. Expected: education is the sector, technician is the occupation; preparing equipment is the task. If still unsure, use the four-sector Floor scaffold and record actual help and incomplete demand. No cold calling or inference from a group answer.

Supported source selection

Begin with HC1, HC3, CO1, CO3, ED2, ED5, RE1 and RE4. The set includes frontline, professional, technical, management and support examples across all four sectors. Add administrator across sectors. Read one row at a time, retaining normal access and fading answer scaffolds where secure.

Retrieval key

Construction and care are broad career/sector areas. The question asks about occupations within them. Do not infer the person should choose either area or that any prior learner profile exists.

Misconceptions

Sector and occupation mean the same thing. A sector is a broad area of work; an occupation is a particular kind of job. Retail is a sector; checkout assistant is an occupation.

Each sector has one kind of worker, and an occupation can belong to only one sector. One sector contains many occupations and overlapping role types. An administrator can work in several sectors; administration is a related job family, not a sector.

Access and feedback

Normal reader, scribe, typing and access aids do not automatically change the attainment route. Record access separately from answer prompts. Keep first and revised placements, actual support, source clues and unmet demand. No cold calling.

VF verbal feedback; WS worked with support; I independent; NS next step; // self-edit; ? read this back to me; E evidence; R responded. Give one precise next step linked to the map or explanation. R requires Voice and Audience, the NS and a learner response in the same colour, on the same page or usual mode; a private adult may be the audience. Use E only when actual evidence is banked. Preserve first thinking and later response separately.

GROW Careers N9 is formative. Assess the sector/occupation distinction and map, using the source end check: can the learner distinguish sector from occupation and give an example of each? The full stated lesson outcome also requires mapping roles within at least four sectors. Keep actual support, gaps, first and changed thinking. Source Week 6 has a combined formative and summative role and Week 7 is summative; do not label all earlier weeks solely formative. Any qualification or accredited-unit mapping is for staff to confirm from actual evidence; no completion is inferred.

Keep actual work in the Careers Portfolio or action plan under usual arrangements. Offer a genuine response to the Communication portfolio; staff confirm any mapping.
