Practice source A

Illustrative practice data. All figures and report dates are made up. They do not describe real work or real places.

Fictional report date: 2 November 2026. Unit: advert records. Each column covers 28 days.

Sector	1–28 Sep 2026	1–28 Oct 2026
Health and care	12	18
Construction	20	24
Retail	30	24
Education	18	21

The same made-up collection was checked in each window. Each advert record was counted once per window. It does not include all jobs. The numbers do not show who got a job.

A row to try

Point to construction. Read the count in each window. Has it gone up, down or stayed the same? What can you safely say?

Source and date tell us where and when. The column label tells us the time counted. Keep both in your record.

Latest means the most recent window in this set. These dates do not turn made-up figures into real facts.

Practice source B

Illustrative practice data. All figures and report dates are made up. They do not describe real work or real places.

Fictional report date: 2 November 2026. Unit: total posts in a different made-up set.

Sector	Oct 2026 starting count	Oct 2027 forecast
Health and care	100	108
Construction	100	104
Retail	100	96
Education	100	102

Each sector starts at 100 posts for this task. A post is a place for a worker. It may already have a worker in it. This is not a list of jobs to apply for.

A forecast is a prediction. This model assumes the made-up service and spending plans stay the same. If plans change, the forecast can change.

A forecast to test

Construction has a forecast of 104 posts. Does this mean four more posts are certain? Explain your view.

A counts advert records. B counts total posts. Do not add their numbers or treat them as the same kind of count.

A model and your next step

Model: health and care in source A

Practice source A has a report date of 2 November 2026. It counts advert records in two 28-day windows.

The count goes from 12 to 18. That is six more records. In this set, more care adverts were counted in October.

This does not prove I would get a care job. I would next check which skills the roles ask for.

Your task in your book

Choose one sector in A or B. Record the source and report date. Add the time window or future date and what is counted.

Use a number or a comparison to back your view. Give a cautious claim and a limit that fits. Keep one next research question.

A record shape

Source and date	Unit and period	Data I use
My cautious claim	A limit	My next question

You may speak, point, write, type or use a reader or scribe. Plan in any language. Keep your first idea and any change.

Floor choices and short frames

Use source A and the retail row. Keep the source page beside this card. An adult can read each choice.

Check	Choices
Which source and report date?	A: Source A, 2 November 2026. B: Source B, 2 November 2026.
What does this row count?	A: People hired. B: Advert records.
Retail in September and October?	A: 30 then 24. B: 24 then 30.
Which claim fits the row?	A: Fewer retail adverts were counted in the later window. B: There are no retail jobs.
What is a fair limit?	A: This set tells us every job. B: It does not tell us who got a job.
What could I check next?	A: The tasks or skills asked for. B: Which job I am certain to get.

Words to help

“My source is ... . Its report date is ... . It counts ... .”

“In this set, ... goes from ... to ... . This may suggest ... .”

“The data cannot tell me ... . My next question is ... .”

You can use your usual aid. Ask for a pause if you need one. No public answer is needed.

Adult key for the choices

Keep this page apart from first choices. An adult answer is not the learner’s own evidence.

Check	Answer
Source and report date	A: Source A, 2 November 2026.
Unit	B: Advert records.
Retail counts	A: 30 then 24.
Claim	A: Fewer retail adverts in the later window.
Limit	B: It does not tell us who got a job.
Next check	A: Tasks or skills asked for.

The retail count falls by six. A small set and two short windows do not show all work. The learner can still say what this row shows.

Keep the learner’s source/date choice, numbers and claim. Record any help that supplied an answer. Usual access aids are separate from answer help. Ask what the claim cannot tell us.
