Staff answers and evidence limits

Tuesday 8 December 2026 | P2 | 40 minutes | Year A

The intended comparison

Source objective: Compare a contrasting place (online resources). Prepared internal cards supply this session's comparison. Fictional Place A is the baseline. Retrieve grid references, digital mapping, settlement features, sampling and spreadsheet graphs as prior skills; invent no earlier learner results.

Matched model answers

S2 shows residential plots: A 12, B 6. The contrast is six plots, or 60% versus 30% of equal twenty-plot samples. The optional difference is thirty percentage points. Workshops are two plots in each sample, or 10% each: a similarity. Services are A 4 and B 6; open space A 2 and B 6. Both totals are twenty. Accept other accurate matched comparisons, but require one similarity and one contrast across two features.

A defensible final note

Example only: S2 shows two workshop plots in each sample. A has twelve residential plots and B six, a difference of six. Routes may cross different settlement areas. S1 describes one short route per place on one day, so more routes are needed before describing the whole place. This model is not a pupil outcome.

An unjustified claim

Reject: The coast caused more open space, so Place B is better. S2 shows a count difference but provides no causal test or basis for ranking places. Ask which part is description, which is an explanation and what evidence would test it. There is no single correct settlement preference.

Evidence and access

Swap Analyst and Checker roles after the first comparison. Keep each learner's final response and actual help. Offer pointing, writing, quiet collaboration, exact scribing or the usual aid. No cold calling or forced reading aloud. A partner's answer cannot prove both understand.

Correct the likely errors

If features are mismatched, return to the category key and compare the same row. If totals differ, do not compare raw counts as though samples were equal; check proportions and method first. If thirty percentage points becomes thirty per cent, use 60% minus 30% and label the unit. If plot counts become population or area, return to S1's sampling unit.

Authentic data and privacy

Use earlier fieldwork only from an approved nameless copy with compatible categories, sample sizes and method checked. Retain real gaps and limitations. If matching is not possible, use the fictional cards and label the work MODEL. Keep names, locations and identifying details separately. Never relabel model data as local fieldwork.

The boundary before next week

Week 6 prepares notes. The later fieldwork enquiry write-up uses actual fieldwork; it is not produced or claimed complete here. Retain sources, explanations and checks. Record an adult reply, next-step prompt and own response only when they happen. Banking and qualification decisions stay separate; any award wording stays [AWARD] or [QUAL].
