

## **Teacher card**

From fieldwork to spreadsheet and graph / LAUNCH\_A2\_W05

Outcome: Record fieldwork in a spreadsheet and graph it.

Evidence to retain: F: accurate transfer, graph and pattern statement.

## **Forty minute route**

Arrival 4 min; starter 3; model 6; shared task 7; check 2; independent 12; review 3; exit 3.  
Pause time is flexible.

## **Preparation**

Choose one independent route. Print the evidence and shared cards, required visual or data sheet, route worksheet and exit. The organiser is one separate A4 page. Keep answers with staff.

Use school fieldwork arrangements. No pupil names or photographs of identifiable strangers are needed. Indoor observation is valid when accurately labelled.

## **Access and regulation**

Pre-teach terminology and model evidence use. Chunk sources and data; provide an initial frame, then reduce it. Maintain normal access arrangements. Extend by weighing limitations, alternative explanations and evidence quality. Adults support access and evidence selection without supplying answers.

Offer a predictable start, private response and agreed pause. No cold calling or forced personal disclosure. Rejoin at one clearly named next step. Keep teen-appropriate examples and the same learning goal across response modes.

Use sensitive content warnings where relevant. Do not ask for family details or personal experiences.

## **Assessment**

Use questioning and the exit response to decide the next step. Record the learner's individual contribution and the access support used.

UAS: no approved unit code is supplied. Match the learner's evidence to the centre-selected unit and exact criteria before submission. This pack makes no automatic award claim.

## **Model and answers**

Read these pages before teaching. Hide the model during independent assessment.

Question: Why is a bar chart suitable for land-use categories?

Evidence: Fictional land-use practice tally. Category: Shops. Count: 8. Units: Count.

Think aloud: It compares counts across separate categories.

Check: What if fieldwork data are missing? Use clearly labelled practice data for the skill, then collect genuine observations before assessing the fieldwork enquiry.

## **Arrival answers**

1. It makes observations more consistent and comparable.
2. A place where people live
3. It compares counts across separate categories.
4. Use clearly labelled practice data for the skill, then collect genuine observations before assessing the fieldwork enquiry.

## **Shared activity reasoning**

### **Exit responses**

Why is a bar chart suitable for land-use categories? It compares counts across separate categories.

What if fieldwork data are missing? Use clearly labelled practice data for the skill, then collect genuine observations before assessing the fieldwork enquiry.

## Teaching and evidence record

Supplied scheme of work teaching sequence: Transfer collected data into a prepared spreadsheet; choose a suitable graph; label axes and describe a pattern.

### Look for

F: accurate transfer, graph and pattern statement.

Accept accurate equivalents, including speech or exact scribing. Check the concept and use of evidence rather than length or handwriting. Record access support separately from content prompting.

BUILD: a concrete example with a reason or demonstrated action. GROW: explain or compare with a relevant detail. LAUNCH: connect evidence and reasoning; use a limitation when the outcome requires it. Keep RE responses non-GCSE.

### Media

Original captioned teaching model made for this pack. It demonstrates the supplied reasoning; it is not historical footage, survivor testimony or a documentary. The full transcript and factual source credits are included.

Use manual steps for a calm pace. The silent MP4 has visible captions and a matching text transcript. External archive media is optional and should be previewed before class.
