

Teacher card

Hazard effects and management / LAUNCH_S2_W03

Outcome: Explain effects and management of a hazard.

Evidence to retain: F: supported judgement, map/graph interpretation and two exit questions.

Forty minute route

Arrival 4 min; starter 3; model 6; shared task 7; check 2; independent 12; review 3; exit 3.

Pause time is flexible.

Preparation

Choose one independent route. Print the evidence and shared cards, required visual or data sheet, route worksheet and exit. The organiser is one separate A4 page. Keep answers with staff.

Use non-graphic maps and data. A bigger magnitude does not automatically mean greater harm; exposure and vulnerability matter.

Access and regulation

Pre-teach terminology and model evidence use. Chunk sources and data; provide an initial frame, then reduce it. Maintain normal access arrangements. Extend by weighing limitations, alternative explanations and evidence quality. Adults support access and evidence selection without supplying answers.

Offer a predictable start, private response and agreed pause. No cold calling or forced personal disclosure. Rejoin at one clearly named next step. Keep teen-appropriate examples and the same learning goal across response modes.

Use sensitive content warnings where relevant. Do not ask for family details or personal experiences.

Assessment

Use questioning and the exit response to decide the next step. Record the learner's individual contribution and the access support used.

UAS: no approved unit code is supplied. Match the learner's evidence to the centre-selected unit and exact criteria before submission. This pack makes no automatic award claim.

Model and answers

Read these pages before teaching. Hide the model during independent assessment.

Question: Which response directly addresses tsunami exposure?

Evidence: B Effects and responses: Shaking and coastal flooding damaged places and disrupted people's lives. Earthquake-resistant design addresses shaking; warnings, evacuation routes and higher ground address tsunami exposure.

Think aloud: Accessible routes and timely warnings that enable movement to higher ground.

Check: Does earthquake-resistant construction remove all tsunami risk? No. Shaking and coastal flooding require different measures.

Arrival answers

1. The feed changes, so the evidence must be traceable to a particular capture.
2. Related to movement of Earth's plates
3. Accessible routes and timely warnings that enable movement to higher ground.
4. No. Shaking and coastal flooding require different measures.

Shared activity reasoning

1. Shaking damages buildings — Earthquake-resistant design. Design addresses shaking, with limits.
2. People in low coastal areas — Accessible evacuation routes. Routes can reduce exposure when usable and timely.
3. No clear information — Warnings and communication. Information supports action but must reach people.

Exit responses

Which response directly addresses tsunami exposure? Accessible routes and timely warnings that enable movement to higher ground.

Does earthquake-resistant construction remove all tsunami risk? No. Shaking and coastal flooding require different measures.

Teaching and evidence record

Supplied scheme of work teaching sequence: Locate a hazard and use case-study evidence to map causes, effects and responses. Compare management choices; independently judge which response addresses a stated risk and why.

Look for

F: supported judgement, map/graph interpretation and two exit questions.

Accept accurate equivalents, including speech or exact scribing. Check the concept and use of evidence rather than length or handwriting. Record access support separately from content prompting.

BUILD: a concrete example with a reason or demonstrated action. GROW: explain or compare with a relevant detail. LAUNCH: connect evidence and reasoning; use a limitation when the outcome requires it. Keep RE responses non-GCSE.

Media

Original captioned teaching model made for this pack. It demonstrates the supplied reasoning; it is not historical footage, survivor testimony or a documentary. The full transcript and factual source credits are included.

Use manual steps for a calm pace. The silent MP4 has visible captions and a matching text transcript. External archive media is optional and should be previewed before class.
