Making one real improvement teacher and cover plan

BUILD Spring 1 Week 5 Tuesday 2 February 2027 P1 Year A Explore

Teach one 40 minute lesson. Both pathways use Explore. Review and improve my piece.

Today: I can make one real change and say how it helps my piece.

Success criteria

I can find the real work and my chosen wish.

I can make one real change in the same art form.

I can keep the before and after states and a reason.

Prepare before pupils arrive

For four pupils: four actual chosen pieces or accurate witnessed sequences, four two-stars-and-one-wish reviews and tests, four books or arts logs and four pencils. Have four labelled spaces to retain both real states.

Provide the four picture-and-word prompts, or display and read them aloud. Prepare one actual adult before version and a real same-form revision for the demonstration.

Use only the resources needed for each agreed wish. Visual routes may need eight small spare sheets and familiar drawing tools. Paint uses a small amount of familiar washable non-toxic paint, five brushes, four mats, two stable water pots, cloths and flat drying space.

Fold-print revisions use fresh paper and the safe four-step method. Keep dry originals intact. Prepare four new sheets plus four spares if needed; use three small dabs, clear borders and gentle pressure.

Sound or silent revision needs a quiet seated space and a clear stop cue. A pupil may direct an adult. A recording device is optional; precise witnessed before-and-after action notes are enough. Keep sound below talking volume.

Set a clear stop signal and quiet option. Offer an invented feeling or abstract theme. Have the prior work or an honest catch-up trial ready for lesson two.

Timing

Arrival 0-3; Starter 3-6; I do 6-12; We do 12-18; Create 18-32; Review 32-37; Exit 37-40 minutes. Tidy in the final two minutes of Review.

Non specialist demonstration

0 to 15 seconds: Show the actual adult before state and chosen wish. Say: I keep this real starting point before I change one part.

15 to 30 seconds: Actually make one revised mark, fresh-print version or changed silent sequence. Say: I make my wish into an action, not just a sentence.

30 to 45 seconds: Place the two actual same-form states together, or perform both witnessed versions. Say: This is the one feature that changed.

45 to 60 seconds: Give a reason and honest effect. Say: I keep both states and name what really happened. A new fold print is labelled as a revised version.

Arrival and starter

BUILD Spring 1 Week 5 Tuesday 2 February 2027 P1 Year A Explore

Arrival 0 to 3 minutes

Pupil task: Find your real piece, two stars and one wish. Look at your actual test from last time. Choose the one change you will make today.

What to say: Use the actual piece and review from yesterday. Ask the maker to point to the two helpful features and the chosen wish. Check that the wish is one small action, not a score or vague judgement. If the work or review is missing, make a tiny fresh piece and a short honest review now, dated today. Do not invent missing earlier states. Keep a before state before changing anything.

What good looks like: The pupil identifies actual own work, a feasible wish and an honest before state, or creates a dated fresh starting piece that can be revised in the same lesson.

Materials free fallback: Read the witnessed silent sequence and review, or let the pupil direct a short fresh sequence now. Observe and note that starting state before the chosen change.

Check and response: A fresh small piece and one real revision today are valid. The record must distinguish that from work recovered from an earlier week.

Starter 3 to 6 minutes

Pupil task: Which wish names an action? Make it perfect, or add a pause before the end? How will you know what changed?

What to say: A useful wish tells us what to do. Compare a vague judgement with adding one pause or widening one gap. Ask how we will retain the before state and observe the after state. The two versions should use the same art form so the comparison is fair. A new art form is a fresh response, not a false revision of a different medium.

What good looks like: The pupil selects a specific action and identifies a real before-and-after comparison in the same form.

Materials free fallback: Perform a short silent sequence, then ask the pupil to direct one longer pause. Name the original and revised actions aloud and keep a precise witness note when recording is available.

Check and response: Adding a pause is an action. Before and after can be two pieces, a sketch and actual changed piece, two work-only images or two precisely witnessed same-form sequences. A device is optional.

Modelling and cover guidance

BUILD Spring 1 Week 5 Tuesday 2 February 2027 P1 Year A Explore

I do 6 to 12 minutes

Pupil task: Watch one wish become a real change. Keep the before state. Make the change. Check its effect. Say what the real after state shows.

What to say: Show a real adult before version and state its two feature-based stars. My one wish is a longer pause before the ending of my calm silent sequence. I perform the original, then actually make the revised sequence with that pause. I compare like with like and say the pause is clearer to me. For a fold print, I keep the original dry print and make a new version on fresh paper with wider spacing, using three small dabs on one half, a clear border, gentle pressing and flat drying. I label this a revised version, not a hidden alteration of the old print. I only claim an effect that the real results show.

What good looks like: The adult makes one actual chosen revision and retains both real states or precise observations. The reason links a feature to the intention, with no automatic claim that every change is better.

Materials free fallback: Actually perform or direct the original silent sequence and the revised sequence. Keep all actions the same except the one chosen pause, size or spacing. The pupil can direct the adult without moving.

Check and response: Ask: 'Did I only write my wish, or did I make the changed sequence?' Expected: made the changed sequence. If unclear, show the before and after pause lengths again and name the observed difference.

Store and log

Use the final two minutes of Review for quiet tidy-up. Keep paintings flat to dry, cap wet materials and wipe mats. Sound and movement pupils retain a simple sequence plan or dated adult observation plus their words. Work-only images are optional. Store the actual first attempt and log together.

Cover teacher route

Find the actual chosen piece, review and one wish. If any are missing, make a tiny honest fresh piece and review it today. Keep a real before state, then help the pupil carry out one small wish in the same form. A dry fold print can have a new labelled version on fresh paper using the safe fold-print method; retain the first print. For no materials, actually perform or direct a silent baseline and revised sequence with one changed feature. Compare the real states, ask for the pupil's reason and record the observed effect. Do not count a planned sentence as an improvement. Retain before and after work or precise witness notes, with the true date, medium and support. Follow the seven-stage timing and final two Review minutes for tidy-up.

Guided practice and task

BUILD Spring 1 Week 5 Tuesday 2 February 2027 P1 Year A Explore

We do 12 to 18 minutes

Pupil task: Help make one chosen class change. Keep the real before and after states. Say which feature changed and why. The model is not your own evidence.

What to say: Use an actual adult visual or silent example. Pupils direct one changed feature, then compare the observed states. Hinge: Which shows a revision happened: A only a sentence saying 'I will change it', or B the real changed work or a witnessed changed sequence? We name what actually happened and its effect for the maker's idea.

What good looks like: The pupil chooses B and identifies a real changed feature. The class comparison uses the same form, and the adult model remains separate from pupil evidence.

Materials free fallback: Witness an original and revised silent action sequence directed by the pupil. Use the pictured or spoken tool prompt to ask what changed and how it helps the intended idea.

Check and response: B shows a change was made. If A is chosen, contrast the planned action with the performed one. Parallel check: 'If I wrote wider gap but the gap stayed the same, have I made that change?' Expected: no. Continue when the pupil can identify one real revised feature.

Create 18 to 32 minutes

Pupil task: In your book or arts log, keep the real before state. Use your one wish to make a small change. For a dry print, you may make a new revised print. Compare the same kind of work before and after. Keep the real result and your own reason.

What to say: Choose a manageable revision linked to the wish. For a painting or drawing, first keep a small sketch, work-only image or other accurate record of the before state, then make the one safe chosen change. For a dry fold print, keep the first print intact and make a new version on fresh paper with the chosen spacing or colour change. Use three pea-sized dabs on one half, a clear fold-and-edge border, gentle pressing and flat drying. Never force paint, glue or rubbing onto a dry original. For sound or silent movement, perform or direct the actual before sequence, then make the same sequence with the one intended change. Compare like forms. If the original medium is inaccessible, make a tiny fresh baseline in the accessible medium, date it today and actually revise that. Review the real effect; if a test did not help, select a smaller feasible action and carry it out rather than inventing improvement. Keep sound below talking volume and use the stop cue. Adult handling follows the pupil's direction.

What good looks like: One real intentional change is made to actual own work or a clearly labelled same-form revised version. Before and after states or precise witness records exist, with a pupil-owned reason. The record says what changed and whether it helped the intended effect, without inventing success or hiding an unchanged result.

Materials free fallback: The pupil performs or verbally directs a short silent baseline and a revised sequence with one real changed pause, pace, size or order. The adult witnesses both and records the actual difference, intended effect, pupil reason and support when a recording method is available.

Check and response: Example only: I kept my first silent sequence. I made the pause longer in the revised one. I can show the difference, and the longer pause helps my calm idea. A physical fold-print revision keeps both actual prints. A changed medium is labelled as fresh work before revising it.

Review and evidence

BUILD Spring 1 Week 5 Tuesday 2 February 2027 P1 Year A Explore

Review 32 to 37 minutes

Pupil task: Show the real before and after states. Say: I changed ___ to help ___. Point to what actually changed. Tidy and keep both states with your log.

What to say: Ask the maker to identify the actual changed feature and the intended effect. The maker may say more practice is needed; retain that truth. If there is no real change yet, help choose one small accessible action and actually try it now. Do not replace evidence with praise or a planned sentence. Keep private sharing available. Use the final two minutes to put tools away, leave wet work flat and retain both states or precise same-form witness records with the log.

What good looks like: The pupil demonstrates or confirms one actual revised feature, explains a reason and reviews its real effect. Before and after evidence is retained, and no pupil is ranked or pressured to disclose a private story.

Materials free fallback: An adult witnesses a repeat of the original and revised silent sequence if needed, reads the difference back and lets the pupil correct the record.

Check and response: A useful review says what changed and why it may help the intended idea. It can honestly note that further practice is needed. The work, not a general adult judgement, supports the statement.

Exit 37 to 40 minutes

Pupil task: Arts log: Before, my piece ___. I made this change: ___. I chose it because ___. After, I noticed ___. My next step is ___.

What to say: Date the actual revision. Record the original state, one change made, the pupil's reason, the real after state and a next step. Keep the actual work or a precise witness comparison. Mark a new fold print as a revised version and retain the first version. Scribe exact words if useful, read them back and allow correction. State the true medium and support; no improvement is invented and no planned change is counted as made.

What good looks like: A dated arts-log entry shows a real before-and-after revision in the same form, with a specific reason and honest evaluation. It records pupil choices separately from adult observation.

Materials free fallback: Take an oral or gestured log after witnessing both actual silent versions. The adult retains precise action notes and the pupil's confirmed reason when recording is available.

Check and response: Example only: Before, my sequence ended straight after the curve. I added a long pause. I chose it to help calm. After, I noticed the ending felt clearer to me. Next I will practise the same pause again.

Access and teaching decisions

BUILD Spring 1 Week 5 Tuesday 2 February 2027 P1 Year A Explore

Adaptations and prompt ladder

Cognition and Learning: Show one instruction at a time. Model a small test, offer two choices, then fade the prompt. Read the task and skill words aloud when needed.

Communication and Interaction: Allow pointing, signing, speech or an adult scribe. Give processing time. Use I chose ___ because ___. Read scribed words back for correction.

SEMH: Use a fictional feeling or abstract idea. Let pupils choose form and audience. Offer a calm pause and agreed return cue. Public performance and personal disclosure are optional.

Sensory and Physical: Offer silent seated movements, large marks and pupil-directed adult handling. Keep sound below talking volume. Stop on a raised hand. Ask before touching work.

EAL: Plan in any language. Teach words through marks and gestures. Accept a labelled sketch or oral explanation. Check meaning before spelling.

1. Point to the place or instruction.
2. Ask a short question.
3. Rephrase the instruction.
4. Provide a scaffold or choice.
5. Model the first step only, then return the task.

Common mistakes and fixes

Writing a wish means the work has improved - A planned sentence is not a made change. Carry out one small action and keep the real before and after states or precise witness notes.

An old dry print must be physically altered - A new version on fresh paper can be the revision. Retain the original, label the new version and compare the two actual prints.

Every change must be called better - Record the observed effect honestly. If a change does not help, select and try a smaller achievable action. Do not invent a successful result.

A new medium can be compared as if it were the same piece - Compare like forms. If access requires a new medium, create a fresh dated baseline in that form and then make a real revision to it.

Feedback

Give one specific success and one next step. VF verbal feedback; WS worked with support; I independent; NS next step; // self-edit; ? read this back; E evidence retained; R responded. Use R only when pupil voice and an audience are present, one NS is set, and the pupil responds in the same colour, on the same page or usual mode. A saved image alone is not R.

Where this leads

Artists, designers and performers test ideas and explain their choices. These skills help when working to a brief.
