Winter plant care

Seasonal growing & plant care.

Gardening and enterprise
Resilience & Change

Our care workspace

Use the checked trays and clean blunt tools.

Cover cuts and use the agreed gloves. Touch is optional.

Keep water away from power. Ask for help with spills.

Wash hands with soap and water after handling.

Light water and warmth

Seedlings need a safe bright position.

Check moisture before watering. Let excess water drain.

Keep suitable warmth away from direct heaters.

We check the tray before choosing a care action.

Room for young plants

An adult checks crowding, true leaves and root room.

Peas may need a larger pot with the root ball kept together.

Suitable small seedlings can be pricked out when ready.

Tiny seedlings can wait. Ask before thinning or moving.

Our readiness decision

Our seedlings are tiny and have enough root room.

A Pull them apart because a week has passed.

B Continue care and wait for the adult readiness check.

Which choice protects the young plants?

Our care jobs

Step	My care job
1	Check light and moisture with an adult.
2	Agree a care action or a reason to wait.
3	Keep the tray code and record the decision.
4	Park tools, clear up and wash hands.

One job at a time. Adult backup covers other days.

My one-line evidence

I checked ____ and chose ____ because ____.

Tell an adult or use your book.

Record the care decision or the reason to wait.

Clear up and exit

Return tools and wash hands with soap and water.

Name one observation and the care choice it helped you make.

An adult backs up the care rota.

Next lesson: a growing calendar and two crop choices.
