The ready plant check

The adult checks the crop, roots and growing space.

Pot on indoors only when more room is needed and ready.

Keep the original pea observation trays indoors.

Leave an unready plant. Keep its root ball intact.

Our practical choices

Actual check	Safe next step
More root room	Pot on indoors with the root ball intact.
Not ready to move	Give needed care, label and review later.
Other crop	Adult confirms crop, site and hardening off.
Unsafe or unknown	Stop, report and use the safe indoor route.

Record the job that actually happened.

Label and record the change

Keep the crop type and original tray code.

Record a pot move, support or care decision accurately.

Use a safe bright position and check before watering.

No eating or promised harvest is part of this task.

A safe next-step decision

The pea roots are tangled and outdoor ground is frozen.

A Pull them apart and plant outside to finish the task.

B Keep roots intact and ask about suitable indoor care.

Which choice protects the plant?

Our care handover

Handover point	Actual agreement to complete
Plant and position	Original code ____ Safe position ____
Checks and response	When ____ What to check or do ____
Adult and backup	Role code ____ Backup and access ____
Acceptance	Adult accepts ____ Unresolved check ____

Daily checking does not mean automatic watering.

My practical evidence

I completed ____ safely.

Our care handover is ____.

An observed job and a truthful handover.

Clear up and hand over

Return tools, clear spills and wash hands.

Read back the label, care checks and adult backup.

Keep the records and confirm the handover is accepted.

A later review is valid when a plant is not ready.
