Plant care outcome jobs

White standard edition

Horticulture outcome.

Practical job list

1 Find the original crop label and code. Agree a safe role.
2 Check need, roots and readiness with the adult.
3 If appropriate, pot on with the intact root ball at its existing growing depth. Settle medium and water only as needed.
4 Original pea trays stay indoors. Plant out only another already-confirmed suitable crop after hardening-off, ground, weather and permission checks.
5 Keep or update the label and record the actual move, care or waiting decision.

Do not move an unready plant merely to finish. An observer, label or recorder job is available. Keep tools low and park before pausing.

Complete the handover

Use the Handover Plan. Confirm an actual adult checker, backup, daily checks, safe access and a contingency. Obtain acceptance before leaving. A daily check does not mean daily watering.

My one line

I completed ____ safely. Our care handover is ____.

If no move happened, say what care or label job actually happened. If no adult has accepted, mark handover not yet complete and let the adult resolve safe cover.

Return tools, clear spills and wash hands with soap and water. No home-care task is required.
