Comparison steps and sentence frames

Tuesday 8 December 2026 | P2 | 40 minutes | Year A

Pink paper version | Read quietly. Point, write, type or use a scribe. No reading aloud is required.

Card 1 check the match

Look at S1 and S2. What is counted? Plots. How many? Twenty on each route. Do both use R, S, W and O? Yes. What is still limited? One route in each fictional place on one day. Point to the matching category before comparing it.

Card 2 find a similarity

Look for a category with the same count. Check both values in S2. Frame: Both sampled routes have __ __ plots. I checked source __. Keep the category and the unit; do not change plots into people.

Card 3 find a contrast

Choose a different category and compare the same feature in both places. Frame: Place A's route has __ __ plots. Place B's route has __. The difference is __ plots. The source is __. A contrast can go in either direction.

Our partner roles

Analyst: choose the feature and make the comparison. Checker: match the code, numbers, unit and source. Swap after the first comparison. You may point, write or speak quietly. You do not have to read aloud. No cold calling. Each learner makes their own final note.

Comparison steps and sentence frames continued

Tuesday 8 December 2026 | P2 | 40 minutes | Year A

Pink paper version | Read quietly. Point, write, type or use a scribe. No reading aloud is required.

Card 4 explain with care

A description tells what the numbers show. An explanation suggests why. Frame: One possible explanation is __. We would need __ to check this. The routes might pass different parts of the settlements. The counts do not prove that coastal location caused the difference.

Card 5 keep a limit

Choose a real limit from S1 or S3. Frame: This is only __, so we cannot claim __. A next check could be __. Think about more routes, another day or how mixed-use plots receive one primary code. Keep the model separate from real fieldwork.

Card 6 optional proportion check

Use the same denominator: twenty plots. Residential is 12 out of 20, or 60%, in A; 6 out of 20, or 30%, in B. The difference is thirty percentage points. Workshops are 10% in both. This step extends the comparison; it does not replace an accurate count sentence.

Finish and check

My own note has one similarity, one contrast, exact numbers, source codes, a possible explanation and a limit. I can point, write, speak quietly or ask for a scribe. My actual help is __. My next check is __. These are comparison notes, not the later assessed fieldwork write-up.
