

Teacher notes and answers

Our school route fieldwork | GROW_SU1_W03 | STAFF ONLY

Lesson alignment

Outcome: Carry out simple fieldwork about my local area.

Evidence: F: method, safe participation and accurate recording.

Teaching: Agree an enquiry and roles; model tallying or observation. Collect data safely, label the location and record results clearly. Use a small set first and extend through a second observation point.

Preparation

Before teaching, check a short supervised route inside the school grounds and name observation point A on the class plan. Avoid traffic, water edges and restricted areas. Agree the question before leaving: What is the land used for along our route? Allocate observer, tally recorder and location checker roles. Use paper and a pencil outdoors. Count each feature once by its main use. Return together, label the sheet, check totals with a partner and enter counts indoors. No photos of people or pupil addresses. If fieldwork is unavailable, label all work AUTHORED PRACTICE and use the supplied tally. A second approved observation point is the stretch.

Give a calm entry and a private way to respond. Offer an agreed pause and one clear step for returning. Accept pointing, speech, drawing, typing or writing without personal disclosure.

Exact unit wording

Scheme of work: GROW Summer 1

Unit

My place and the wider world

Enquiry

How does our locality compare with other places?

Success criteria

I can locate places, use maps and grid references, collect observations, distinguish physical and human features and support a comparison with evidence.

Vocabulary

map, location, key, scale, grid reference, GIS, fieldwork, enquiry, data, observation, physical feature, human feature, land use, comparison

Resources

OS maps; atlases; digital GIS; local-area resources; contrasting-place images; tally sheets; vocabulary mats; scaffolded organisers.

Access and challenge

Chunk sources and tasks; pre-teach vocabulary with images. Offer sentence stems, organisers, oral rehearsal and typing. Start with one modelled example; extend through a second source, comparison or supported judgement. Check the learner can begin within two minutes, then fade prompts. Begin with a simplified map or data set, then add a stretch layer. Use clear fieldwork roles and a return-to-recording routine.

Teaching sequence

Nine stages totalling forty minutes

Stage	Min	Focus
Opening	0	State the goal and enquiry.
Arrival	4	Use a route with the supplied reminders.
Starter	3	Use the donor vocabulary activity.
I do	6	Model the four steps.
We do	7	Use the shared activity and partner checks.
Check	2	Ask for an explanation and improve it.
Independent	12	Fade content prompts, keeping agreed access support.
Review	3	Check one detail against the evidence.
Exit	3	Hear two individual responses.

Worked model

Question: Which use has the highest count in the authored practice tally?

Evidence: The Outdoor play row records 6 features. The Nature row records 5.

Think aloud: I check every row. Outdoor play has the highest count in this practice sample.

Check: I label the location and units. Counts show features, not land area. Real class counts replace the practice data.

Arrival answers

Staff only

Supported

1. A key explains map symbols.
2. Accept a named category from card C.
3. So another reader knows where the count was made.
4. The adult supervises the route.

Standard

1. It identifies where the observations were made.
2. It records observations as count marks.
3. Count each feature once by its main use.
4. Check tallies and totals and label the location.

Stretch

1. Different categories would make the counts hard to compare.
2. Mark it and check the classification with the adult.
3. No. It records only the selected point.
4. Recount the tally marks and check the totals and location label.

Checks and assessment

Record the learner's own response and support

Shared and method checks

Outdoor play has the highest practice count, with 6 observed features.

No. A feature count tells how many features were recorded, not their area.

Practice values: Learning 4; Outdoor play 6; Travel 3; Nature 5; Growing 2; Services 1. Total 21 observed features. Outdoor play is highest and Services is lowest. These counts cannot establish area. Zero means a checked count of none; a blank means missing evidence and must be checked.

Independent and exit judgement

Use the chosen route's question as the checklist. Accept accurate pointing, speech, drawing, typing or writing. Require a named detail and a reason where asked. Open conclusions may differ if supported. Do not treat a copied model as an independent response.

Record the learner's response and the support provided. Use one specific improvement and a fresh attempt to inform the next lesson.

Sources and evidence record

Keep with the teacher copy

Authored practice tally and school-route method: ../../Sources_and_checks.html#w03

The full claim-by-claim record is in the root Sources_and_checks.html. New teaching pictures are authored diagrams, not photographs or surveyed local maps. The retained world reference uses the donor outlines and credit.

Local preparation and source checks

Learner's own response and evidence selected

Access support / content prompts / adult note

Accuracy check and next step

Lesson vocabulary

Use these definitions with the lesson and knowledge organiser.

enquiry — A question we investigate

tally — A mark used to count an observation

land use — What an area or feature is used for

method — The steps used to collect evidence
