

Teacher notes and answers

Our locality study and evidence | GROW_SU1_W06 | STAFF ONLY

Lesson alignment

Outcome: Complete a fieldwork and locality study and bank UAS evidence.

Evidence: S: enquiry outcome, map/data accuracy and conclusion; retain evidence.

Teaching: Assemble the enquiry question, method, mapped observations and comparison.

Independently state a conclusion supported by data; review accuracy and select evidence for UAS.

Preparation

Use the class enquiry and checked observations from Week 3, feature labels from Week 4 and the place comparison from Week 5. Learners may rebuild missing sections using the supplied practice evidence, clearly labelled as practice. Model on a different short example before independent assessment. Keep communication and access support, remove answer models, record prompts and accept a dated adult note of the learner's own explanation. Select evidence for centre checking against an appropriate UAS outcome; assign no unit code here. Store only school-approved learner identifiers, never home addresses.

Give a calm entry and a private way to respond. Offer an agreed pause and one clear step for returning. Accept pointing, speech, drawing, typing or writing without personal disclosure.

Exact unit wording

Scheme of work: GROW Summer 1

Unit

My place and the wider world

Enquiry

How does our locality compare with other places?

Success criteria

I can locate places, use maps and grid references, collect observations, distinguish physical and human features and support a comparison with evidence.

Vocabulary

map, location, key, scale, grid reference, GIS, fieldwork, enquiry, data, observation, physical feature, human feature, land use, comparison

Resources

OS maps; atlases; digital GIS; local-area resources; contrasting-place images; tally sheets; vocabulary mats; scaffolded organisers.

Access and challenge

Chunk sources and tasks; pre-teach vocabulary with images. Offer sentence stems, organisers, oral rehearsal and typing. Start with one modelled example; extend through a second source, comparison or supported judgement. Check the learner can begin within two minutes, then fade prompts. Begin with a simplified map or data set, then add a stretch layer. Use clear fieldwork roles and a return-to-recording routine.

Teaching sequence

Nine stages totalling forty minutes

Stage	Min	Focus
Opening	0	State the goal and enquiry.
Arrival	4	Use a route with the supplied reminders.
Starter	3	Use the donor vocabulary activity.
I do	6	Model the four steps.
We do	7	Use the shared activity and partner checks.
Check	2	Ask for an explanation and improve it.
Independent	12	Fade content prompts, keeping agreed access support.
Review	3	Check one detail against the evidence.
Exit	3	Hear two individual responses.

Worked model

Question: What can I conclude from a separate practice count of 3 benches and 1 bin at point X?

Evidence: The practice record labels point X and counts 3 benches and 1 bin once each.

Think aloud: More benches than bins were recorded at X. This only answers a question about those counted features.

Check: I label this as practice and note its limit. My own study needs mapped data, a comparison, a conclusion and a record of support.

Arrival answers

Staff only

Supported

1. It is a question to investigate.
2. It explains how evidence was collected.
3. On both the observation record and matching plan point.
4. It should use checked evidence.

Standard

1. Question, method, mapped observations, comparison and conclusion.
2. Check labels, units and plotted values against the recorded counts.
3. It makes the learner's contribution and any help clear.
4. Identify the gap and plan an appropriate check.

Stretch

1. An accuracy check or new evidence may change the supported answer.
2. Label authored data as practice and keep real observation details separately.
3. The learner's own response, date, support and prompts.
4. Explain which requirement each selected item demonstrates and state any gap.

Checks and assessment

Record the learner's own response and support

Shared and method checks

It answers the enquiry using checked data and states a limit.

Yes. Record the response faithfully, with the date and all support or prompts used.

Require question, method, mapped observations, comparison and a conclusion that uses checked data. Record source limits and support. For missing prior work, use the Week 3 practice tally and Week 5 cited cards, but identify practice evidence clearly. Adult notes must distinguish the learner's words from prompts. The centre checks any chosen UAS requirements before banking evidence.

Independent and exit judgement

Use the chosen route's question as the checklist. Accept accurate pointing, speech, drawing, typing or writing. Require a named detail and a reason where asked. Open conclusions may differ if supported. Do not treat a copied model as an independent response.

Retain access support during the individual study. Remove answer models, record all content prompts and keep the learner's own conclusion or an adult note of it.

Sources and evidence record

Keep with the teacher copy

Authored practice study and evidence checklist: ../../Sources_and_checks.html#w06

Unit scheme and assessment wording: ../../Sources_and_checks.html#sow

World-outline provenance record: ../../Sources_and_checks.html#world-map

The full claim-by-claim record is in the root Sources_and_checks.html. New teaching pictures are authored diagrams, not photographs or surveyed local maps. The retained world reference uses the donor outlines and credit.

Local preparation and source checks

Learner's own response and evidence selected

Access support / content prompts / adult note

Accuracy check and next step

Lesson vocabulary

Use these definitions with the lesson and knowledge organiser.

conclusion — An answer supported by the enquiry evidence

accuracy — How closely a record matches the evidence

comparison — A review of similarities and differences

support — Help used while completing a task
