Teacher and cover plan — Try it once, then say what happened

Pathway: BASE · Week 4 Part 1 · Big question: What happens when we test sponge tapping and wax resist on our sign?

Learning goals and studio kit

• Try two new art tricks: sponge tapping. Wax resist.

• Watch how the marks look when they dry on card.

• Say in one short line what worked well.

Studio kit: Two-box studio test sheets, card cut shapes, small sponge sponges, thick paint trays, white wax crayons, dark water wash

Arrival and starter

Arrival: Look at the white wax crayon on your tray. Can you see white wax on white card. First you paint?

Starter question: Why do we dab a paint sponge straight up and down instead of scrubbing side to side?

Teacher model (I do)

Step 1: Dab the sponge in Box A: I hold my cut shape flat. Tap the sponge lightly up and down around the shape.

Step 2: Draw firm wax lines in Box B: I press hard with a white wax crayon to draw my sign. Mark sets in Box B.

Step 3: Wash ink and say what happened: I sweep dark blue ink over Box B, see the white wax pop out,. Tick my log note.

Practice routes (Supported / Independent / Aspire)

Supported: Both boxes tested with one ticked review short line.

Independent: Two clean art skill trials. Two done log short lines.

Aspire: Two main boxes plus a combined trial. Written reflection.

TA and cover notes

TA focus: Give supported learners pale yellow wax crayons instead of white so they can see their lines as they draw. First adding blue wash.

Staff prep: Staff preparation only: review a short clip demonstrating cut shape sponge tapping vs wax-resist wash.
