Tier pack: Aspire route — Critique, test and redirect the design

Pathway: TRACK · Week 4 Part 2 · Big question: How do we use a structured studio critique to spot a weak area and test one material fix?

Aspire route studio steps

Step 1: Audit your panel across all three studio criteria (silhouette balance, 3-level relief shadow, and tonal value range).

Step 2: Produce two comparative test swatches testing alternative surface solutions for your target zone.

Step 3: Select the stronger swatch, execute the refinement on your main panel, and write a critical reflection on your redirect.

Success check

Two comparative swatches, resolved panel refinement, and critical reflection.

Make-it studio planner

Select your audit target, swatch test, and panel upgrade.

Options: Target: boost focal joint, Target: separate dark pillar, Target: balance empty corner, Target: deepen recess shadow

Review checklist

[ ] Place your upgraded panel next to your mounted swatch to verify the improvement.

[ ] Thank your critique partner for their diagnostic feedback.

[ ] Store your panel safely for final resolution.
