TA studio brief — Creative practitioners and studio roles

Pathway: TRACK · Week 5 Part 2 · Big question: How do sculptors, printmakers, and exhibition designers turn raw materials into public artworks?

TA practical setup & focus

Display a small cardboard maquette next to a photo of a large steel arch with a small card scale-person standing beside it to make 'scale' concrete.

Studio kit: Practitioner role fact cards, studio workflow diagrams, A4 study sheets, fineliners, toned paper strips, metallic pencils, glue sticks

Key words to prompt

• practitioner: A skilled creative maker who works with specialist studio methods.

• maquette: A small-scale 3D test model built to check form and balance before making a big sculpture.

• fabrication: Building and joining the full-size artwork in a workshop or foundry.

• commission: A formal brief asking a maker to design an artwork for a specific place.

• scale model: A miniature version built in exact proportion to the real space.

Supported route steps

1. Match the three creative roles (Sculptor, Printmaker, Designer) to their studio tools on your sheet.

2. Sketch or glue a small layered beam study into the 'Maquette diagram' box.

3. Tick the two studio steps you have already used in this unit (testing textures and building card layers).

4. Complete the sentence: 'Like a sculptor, I tested ___ before finishing my panel.'

Check: Three roles matched, maquette diagram completed, and personal studio link written.

Review & exit support

Exit question: Why do sculptors and architects build a small tabletop 'maquette' before fabricating a full-size structure?

Staff note: Staff preparation only: review a short overview of studio roles (sculptor, printmaker, exhibition designer) and maquette prototyping.
