# Tier pack: Supported route — Framing a site-specific visual brief

Pathway: SUMMIT · Week 1 Part 2 · Big question: How do architects and public artists analyse spatial context, sightlines, and structural form to write a rigorous studio brief?

## Supported route studio steps

Step 1: Use the acetate grid to sketch the main arch or truss shape and its open triangle voids into the elevation box.

Step 2: Attach two small texture rubbings/swatches to show your planned surface grain.

Step 3: Complete the four structured sections of the Studio brief (Theme, Main shape, Three materials, Contrast rule).

## Success check

Proportional elevation drawn with two texture swatches and four brief sections completed.

## Key words helper

• site-specific: Designed deliberately to respond to the architecture, materials, and viewpoints of a particular place.

• sightline: The direct line of view from an audience position to the artwork.

• void: A deliberate open negative space carved through or framed by a solid structure.

## Review checklist

[ ] Check that your elevation drawing clearly labels Layer 1 (base), Layer 2 (mid), and Layer 3 (high relief).

[ ] Confirm all four written sections of your Studio brief are complete and legible.

[ ] File your Studio brief as the master plan for your practical build.
