Tier pack: Independent route — Creative practice, studio roles and pathways

Pathway: SUMMIT · Week 2 Part 2 · Big question: How do interdisciplinary creative groups take a structural commission from studio prototype to public installation?

Independent route studio steps

Step 1: Analyse how a commission moves through Concept design, Structural engineering, Fabrication, and Curation on your A3 sheet.

Step 2: Engineer and mount an 8 cm structural joint prototype demonstrating 3-level lamination, gusset reinforcement, and metallic patina.

Step 3: Write a formal Fabrication specification beside the prototype detailing layer order, structural rigidity, and tonal finish.

Step 4: Reflect on how engineering and curation decisions will shape your Week 3-4 studio build.

Success check

Role analysis, mounted 3-level joint prototype, formal fabrication spec, and reflective link.

Key words helper

• interdisciplinary: Different specialists (artists, engineers, fabricators, curators) working together on one project.

• prototype: A working test section built at real or scaled size to prove a joint or surface finish works.

• specification: A precise technical instruction naming materials, dimensions, and surface treatments.

• structural load: How weight and force travel through beams, arches, and joints so a piece stands safely.

• curatorial narrative: The story and layout a curator designs to help the public engage with an exhibition.

Review checklist

[ ] Test your mounted corner prototype gently with your finger to verify the gusset joint is rigid and flat.

[ ] Check that your Fabrication specification lists materials, joinery, and patina steps clearly.

[ ] Add your Studio practice & Pathways board to your portfolio.
