Tier pack: Aspire route — Analysing curated spaces and audience impact

Pathway: SUMMIT · Week 4 Part 2 · Big question: How do curatorial choices — scale, lighting angle, sightlines, and framing — shape audience meaning in an exhibition?

Aspire route studio steps

Step 1: Resolve directional patina on your relief panel by pairing top-left specular highlights with deepened undercut shadows.

Step 2: Design a complete three-zone exhibition layout (Zone 1: Site & Brief, Zone 2: Process & Maquettes, Zone 3: Lit relief Installations) with sightline elevations.

Step 3: Write an introductory Curatorial wall Panel and a critical evaluation of how spatial choreography shapes viewer meaning.

Success check

Resolved directional panel, three-zone exhibition elevation, wall text, and critical evaluation.

Make-it studio planner

Configure your lighting angle, patina enhancement, and curatorial layout.

Options: Light: 25° top-left raking beam, Light: Side grazing spotlight, Light: Dual cross-angled LEDs, Light: High contrast gallery spot

Review checklist

[ ] Shine the directional lamp across your panel one final time to confirm your dry-brush highlights match the raking light angle.

[ ] Check that your Curatorial analysis board includes both your lighting diagram and audience impact notes.

[ ] Store your resolved relief panel safely for the showcase.
