Staff answers & diagnostic guide — Designing a peer studio workshop project

Pathway: SUMMIT · Week 5 Part 2 · Big question: How do we design a structured, safe, and inspiring practical workshop to lead our peers in building a relief study?

Starter answer & explanation

Question: Why do effective workshop leaders prepare pre-sized base tiles for a 15-minute session rather than asking participants to measure and saw large boards from scratch?

Correct: Pre-sized base tiles remove slow measuring bottlenecks so participants can focus straight away on mastering the relief and patina skill — Exactly! Good workshop design maximises hands-on skill time.

Guided team check (We do) answers

Q1: What should be included in the 'Safety & Risk check' box of your Workshop leadership board? -> Specific studio hazards (sharp foil edges, glue spills, scissors/rulers) paired with clear preventative rules (Correct. Practical risk controls protect everyone at your table station.)

Q2: What is a 'contingency plan' when leading a practical art activity? -> Having a ready solution if something goes wrong (e.g. spare pre-embossed foil strips if a tile tears, or tissues if wash is too wet) (Spot on. Planning for common hiccups

keeps your workshop stress-free.)

Q3: How do your three mounted Stage Exemplar tiles help participants who learn best visually? -> They can compare their own piece directly against Tile 1, Tile 2, and Tile 3 at every stage of the build (Yes! Self-checking against physical stage models builds instant independence.)

Exit check answer

Question: In workshop design, why do we prepare physical Stage 1, Stage 2, and Stage 3 exemplar tiles AND pre-cut base blanks?

Correct: To remove setup bottlenecks and give participants clear visual benchmarks at every stage of the 15-minute build — Correct. Smart preparation and visual scaffolding are the secrets of great studio leadership.
