Backbones and No Backbones · Knowledge Organiser

Learning goal: I can find a backbone on a diagram and sort animals with and without a backbone.

Today I Can

I can point to a backbone on an inside picture.

I can sort animals into backbone and no backbone.

I can name one way an animal with no backbone stays supported.

Must-Know Words

backbone: a line of small bones down the back

vertebrate: an animal with a backbone inside

invertebrate: an animal with no backbone inside

shell: a hard case on the outside of a body

Core Science Steps

Look at the fish diagram first. It shows a line of small bones down the middle.

When an animal has a backbone inside, we put it in the backbone group.

Now look at the crab. Its hard case is outside, and it has no backbone inside.

Keep the Science Clear

Look at the inside clue first. Say: 'It has a backbone because I can see a row of bones.'

Size, fur, or legs do not prove a backbone. Check the inside bone clue every time.
