Muscle Model · Pupil Resources

Learning goal: I can test a card and string arm model to show how two muscles pull a joint.

Arrival Questions (In your book)

1. What do the stiff card strips stand for?
2. What does the split pin stand for?
3. What do the two strings stand for?
4. Can you ask an adult to help?

Starter Question

Why is string a good model for a real muscle?

A. A string can pull when tight, but it goes floppy if you try to push it.

B. A string is made of hard bone.

C. A string can push heavy things.

Method Strip

1. Lay the card arm model flat on your desk so you can see String A and String B.
2. Keep String B loose and pull String A gently. STOP AND CHECK what happens.
3. Now keep String A loose and pull String B gently.
4. Try pushing String A gently and watch the string go slack.
5. Write or tick your results in your book.

Exit Ticket

What body part does the string stand for: bone or muscle?

What happened when you pulled String A while String B stayed loose?

Name one thing a real muscle does that a piece of string cannot do by itself.
