Fair Test · Pupil Resources

Learning goal: I can plan a fair test by naming what to change, what to measure, and what to keep the same.

Arrival Questions (In your book)

1. Which box shows a fair test: Box 1 or Box 2?
2. How many variables should you change on purpose in a fair test?
3. What do we call the variables we keep the same?
4. Can you ask an adult to help?

Starter Question

Why must we keep the drop height the same when testing different parachute sizes?

A. So any change in fall time is caused by the parachute size, not a higher drop.

B. Because rulers only measure 1 metre.

C. So we do not need a stopwatch.

Method Strip

1. Lay the Fair-Test Planning Mat flat on your desk.
2. Place the Independent Variable card in the Change box. STOP AND CHECK.
3. Place the Dependent Variable card (with units) in the Measure box.
4. Place at least three Control Variable cards in the Keep the Same box.
5. Copy your completed fair-test plan and prediction

into your book.

Exit Ticket

In the parachute plan, what is the one variable we change (independent variable)?

What do we measure (dependent variable) and what unit do we use?

Name two control variables we must keep the same and explain why.
