Fair Test · TA Brief

Learning goal: I can plan a fair test by naming what to change, what to measure, and what to keep the same.

Watch (staff preview first)

Short silent teacher demonstration clip for this lesson's model and practical sequence · preview before class use.

Adult Support Routine

No cold calling; nobody is asked to read difficult text aloud.

Give time to start -> point to the relevant place -> rephrase -> offer a small prompt or word bank -> reduce to a limited choice.

Beside the You do in the pupil book, mark I (independent), S (supported) or C (choice).

Must-Know Words

independent variable: the one factor we change on purpose in a fair test

dependent variable: the factor we measure to see the effect of our change

control variable: a factor we keep the same so the test is fair

fair test: an investigation where only one factor is changed while all others are kept constant

Key Answers

A. If drop height also changed, we would not know whether size or height changed the fall time.

A. Ramp height is what we change on purpose (IV); rolling distance is what we measure (DV).

1. Parachute canopy area (size). 2. Fall time in seconds (s). 3. Same drop height (1.5 m) and same load mass (10 g), so any change in fall time is caused only by canopy area.
