Fair Test Practical · TA Brief

Learning goal: I can record repeated results, spot an odd reading, and use the data to answer our question.

Watch (staff preview first)

Short silent teacher demonstration clip for this lesson's model and practical sequence · preview before class use.

Adult Support Routine

No cold calling; nobody is asked to read difficult text aloud.

Give time to start -> point to the relevant place -> rephrase -> offer a small prompt or word bank -> reduce to a limited choice.

Beside the You do in the pupil book, mark I (independent), S (supported) or C (choice).

Must-Know Words

air resistance: a frictional force from air pushing against a moving object

repeat trials: doing the exact same test more than once to check the readings match

anomaly: an odd result that is very different from the other repeats

conclusion: a scientific answer that uses the recorded numbers to explain the pattern

Key Answers

A. A larger canopy area increases air resistance opposing the fall, so it falls more slowly.

A. 1.3 s is the anomalous reading caused by the unopened canopy; the valid trials cluster around 3.4 s.

1. 30x30 cm (3.4 s). 2. Its larger surface area meets more air particles, producing greater upward air resistance. 3. Keep the reading visible, circle/flag it as an anomaly, and carry out a clean repeat drop.
