Fair Test Practical · Tier Pack · Supported

Learning goal: I can record repeated results, spot an odd reading, and use the data to answer our question.

Supported Route (Book First)

Record the typical times (1.2 s, 2.1 s, 3.4 s), circle which parachute fell slowest, and complete the sentence.

Help: 3.4 s is the longest time. The __ canopy fell slowest because it had the most air resistance.

Optional Make It · Supported

Make a Slowest-Fall Pointer Card

Match the three typical times (1.2 s, 2.1 s, 3.4 s) to the three parachute pictures and circle the slowest parachute in your book.

Word Help

air resistance: a frictional force from air pushing against a moving object

repeat trials: doing the exact same test more than once to check the readings match

anomaly: an odd result that is very different from the other repeats

conclusion: a scientific answer that uses the recorded numbers to explain the pattern

Exit Check

Which parachute took the longest time to fall: 10x10

cm (1.2 s) or 30x30 cm (3.4 s)?
