

Our class map

Pupil resources | BUILD Humanities Summer 1

Record local features on a class map.

Demonstration only: a map entry

Use your class's own checked plan for the final task.

Key: T = tree B = bench

The bench is to the right of the tree on this plan.

Use the class's own checked plan and actual local observations. Keep an individual contribution record as well as the shared map.

Our checked class plan

Attach or draw from the class's own checked plan

Adult: mount a copy of the class's own checked school/local plan here or use the existing class map. Confirm the source and date before pupils add entries. Do not substitute the invented demonstration or the practice tally for local evidence. No home addresses.

Plan source and date checked

Mount the checked plan here

Key used by our class

My map contribution

Individual evidence for the class map

Use the same orientation as the checked class plan. Draw or describe your entry. An adult may record what you point to or say; your choice and explanation must remain your own.

My feature and its position

My symbol or label	Its key meaning

My checked observation or source

My explanation and one check or improvement

My unit review

Use your own earlier work and today's contribution

Show evidence or give a fresh response for each prompt. If evidence is missing, tell your teacher what you need to try next.

Point to a familiar feature and explain its symbol or label.

Use your earlier comparison sources to explain one similarity or difference.

Show an observation you recorded. Say whether it was real fieldwork or practice.

Name and locate one continent and one ocean on the supplied world map.

Arrival task

Supported | Our class map

A map symbol stands for a feature. A key explains it. We will use checked evidence to decide which entries belong on our class map.

Use the reference sheet. Start with questions 1 and 2.

1. Point to the tree symbol on the practice plan.

Help: Use T in the key.

My response

2. What does B mean in the key?

Help: Choose bench or ocean.

My response

3. Which can help check a map entry: an observation or a guess?

Help: Choose the checked source.

My response

4. Show where the key is.

Help: Look for symbol meanings.

My response

Arrival task

Standard | Our class map

A map symbol stands for a feature. A key explains it. We will use checked evidence to decide which entries belong on our class map.

Use the reference sheet. Start with questions 1 and 2.

1. What is a map key for?

Help: Think about symbols.

My response

2. Where is the practice bench in relation to the tree?

Help: Keep the plan the same way up.

My response

3. Why check the evidence before adding a feature?

Help: Think about an accurate map.

My response

4. Should our school map include home addresses?

Help: Think about the map's purpose.

My response

Arrival task

Stretch | Our class map

A map symbol stands for a feature. A key explains it. We will use checked evidence to decide which entries belong on our class map.

Use the reference sheet. Start with questions 1 and 2.

1. How could an old map entry become inaccurate?

Help: Think about changes to a place.

My response

2. How can we check an uncertain position?

Help: Use a checked plan or adult observation.

My response

3. Can a shared map prove who made each decision?

Help: Think about individual evidence.

My response

4. Why label practice data clearly?

Help: Think about confusing it with observation.

My response

Shared activity

Decide which map entries belong

1. Read each proposed map entry. Choose Add to map, Check first or Leave out.
2. Explain your choice using the evidence and the purpose of a local map.
3. On the shared checked plan, rehearse one verified entry and its key label.

Card	My choice
The adult-checked plan and today's observation agree: a bench is beside the tree.	
A visitor thinks there may be a bin behind the hall, but nobody has checked.	
Someone suggests adding a pupil's home address.	
A practice tally from an invented area shows five trees.	
An old plan shows a bench, but it may have moved.	

Our evidence and explanation

Independent task

Supported | Our class map

Record local features on a class map.

Use the class's own checked plan and actual local observations. Keep an individual contribution record as well as the shared map.

1. Choose one checked local feature from two options.
2. Place its symbol at the verified position on the class plan.
3. Point to its key meaning and give your own explanation.

Help: An adult reads the evidence. Use: I added _____. It is _____. I checked _____.

My feature and map position

My symbol and key meaning

Evidence I used

My explanation and check

Further challenge: Check a second symbol or explain one source.

Independent task

Standard | Our class map

Record local features on a class map.

Use the class's own checked plan and actual local observations. Keep an individual contribution record as well as the shared map.

1. Select a feature supported by the checked local evidence.
2. Add its symbol or label to the class map and update the key.
3. Record and explain your own contribution and one check.

Help: Use: My source shows _____. I placed _____ beside _____. The key means _____.

My feature and map position

My symbol and key meaning

Evidence I used

My explanation and check

Further challenge: Review one earlier comparison and one continent/ocean response.

Independent task

Stretch | Our class map

Record local features on a class map.

Use the class's own checked plan and actual local observations. Keep an individual contribution record as well as the shared map.

1. Choose a useful local feature and justify your evidence.
2. Add an accurate symbol or label and check its position.
3. Explain one uncertainty or limit and how to check it.
4. Review your earlier unit evidence and identify a next step.

Help: Use the class plan and real observations. Say what is confirmed and what still needs checking.

My feature and map position

My symbol and key meaning

Evidence I used

My explanation and check

Further challenge: Suggest one change that would make the class map easier for a visitor to use.

Exit tickets

Use only your chosen route

Give your own response. Your usual communication support can stay.

Supported

1. Show the feature you added and its key meaning. Point, speak or use your contribution sheet.

2. What helped you check its position? Name or point to your evidence.

Standard

1. Explain your own class-map contribution. Include the feature, position and key.

2. Which evidence supports it? Say one check or improvement you made.

Stretch

1. Justify your map entry using checked evidence. Explain any remaining uncertainty.

2. What does your unit evidence show you can do next? Choose a specific map, comparison, observation or world-location step.
