# Staff answers and teaching notes

Exact goal: I can present researched solar system findings clearly, credit sources and respond to an audience question with a change or a clear reason plus one transfer step.

Weekly line C41: Research and present findings about the Solar System (ICT).

Arrival: find the prior research question and a paraphrased fact with its source code. The Sun, Earth and Moon are approximately spherical. Several views can support a shape claim. Accept precise explanations in any agreed response mode.

Starter: protect the first choice before the model. The second opening is the clear model because it gives a question and an answer claim. The first is an unfocused list. The third delays the topic behind an effect.

Hinge: second option. Claim plus relevant facts, source codes and a helpful labelled diagram allow the audience to judge the scientific case. Option1 mistakes decoration for evidence. Option3 is copying without explaining a focus.

Glitch: second option repairs the claim. More animation does not itself improve scientific evidence. Do not reinforce option1 movement-as-proof or option3 hidden sources.

# Studio answer key

Opening line: Focused claim. This gives the question and the answer claim.

Supporting fact: Evidence and source. This gives a fact and shows where to check it.

Labelled diagram: Evidence and source. This makes a fact clear and gives its source.

Received question: Audience response and next step. This shows that the speaker received the question.

Visible revision: Audience response and next step. This shows a useful change made after a question.

Confirmed, then transfer: Audience response and next step. This says why the work stays and gives one next use.

One-sentence answer: Focused claim. This gives the answer claim before the detail.

Keep all seven cards. There are two claim cards, two evidence cards and three audience-response cards. An accurate no-content-change decision is valid when it includes a reason and one transfer step.

# Briefing and evidence guide

Prepare paper and school-device routes. Name a real audience for each pupil. Keep the notes from the research lesson with their source labels. Supply question prompts about meaning, evidence or sources.

Check content for flashing or distressing effects. Use school accounts and keep personal information private. Offer signed, spoken, pointed or exact-scribed routes and a quiet audience. Keep the same science goal.

Use the pupil research record as the evidence source. Do not invent missing data or promote an unverified fact to certainty. The source Mars example attributes the red surface to iron minerals reacting with oxygen. A diagram not to scale must say so.

Model order: question, answer claim, 2–3 sourced facts, helpful diagram, audience question, recorded response and next use. Source button order remains deliberately mixed for the pupil sequence task.

Independent evidence: a saved slide, paper panel or witness record; source labels; a genuine received question; and either a visible before/after change or a reasoned confirmation plus one transfer step.

Exact pupil meaning counts. Adult scribing must not upgrade an answer. No cold calling; a pupil may pass. Offer one familiar audience before widening the group.
