

A delivery puzzle

Learning intention

Describe digestion and circulation, then explain how they work together.

How does something from lunch reach a muscle?

Today: identify the two systems doing different jobs.

Name it, then say its job

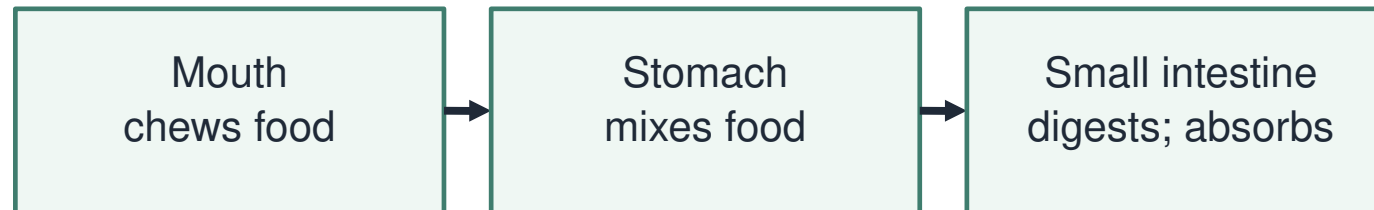

R1. Name an organ in the chest.

R2. Name an organ that handles food.

R3. Does naming an organ explain its job?

I follow the food route

Digestive system: a processing route

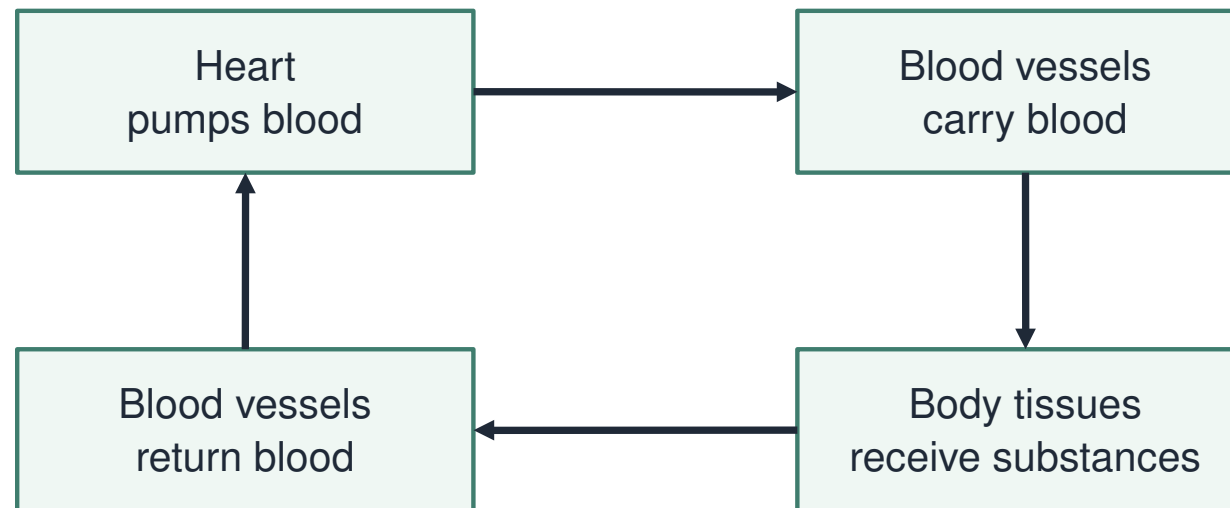

Also included: oesophagus, large intestine, rectum and anus. This map shows selected jobs.

I find the organ. I read its job. Chewing is one part of digestion. The stomach does not finish every task.

I follow the transport route

Circulation: transport around a network

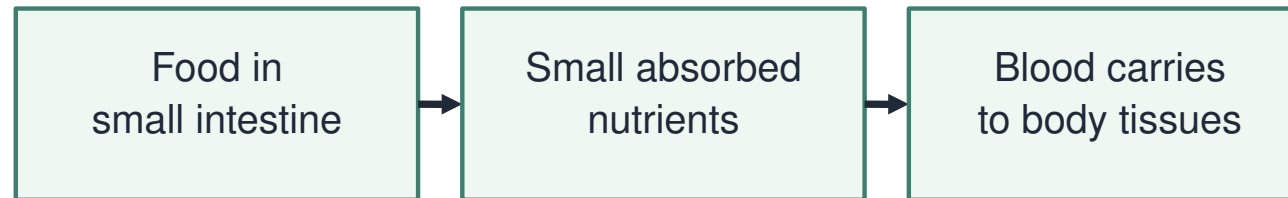

Simplified job map: the lung route is omitted here.

The heart pumps blood. Blood vessels form routes around the body. Blood carries useful substances and some wastes.

I connect the two systems

Where the systems connect

The gut wall is crossed by small substances.
A whole sandwich does not enter a blood vessel.

Digestion supplies small absorbable substances. Circulation transports absorbed nutrients. I must change “food” to “small nutrients”.

Organ-and-job dispatch

Use evidence cards A–F. Sort A–E into digestive or circulatory. W1. Explain one placement using the job.

Card	Job clue
A: Mouth	Chews; saliva begins digestion
B: Stomach	Mixes food and juices
C: Small intestine	Digests and absorbs
D: Heart	Pumps blood
E: Vessels	Carry blood

The mixed-up display

Display: “Stomach pumps blood. Heart breaks food down.”

W2. Replace both job labels.

Use a card as your reason.

Check the delivery claim

Display: “Bread crumbs travel inside blood vessels.”

W3. Keep, reject or repair this claim.

Show the link between two systems.

Which explanation links the systems?

Choose, then explain one word.

A The heart digests lunch.

B Digestion produces small nutrients; blood transports them.

C The stomach works without any other body system.

Build the museum panel

Choose supported, standard or stretch.

Use page 1 as your evidence.

Your panel must explain both systems.

A useful sentence frame

“The _____ belongs to the _____ system.”

“Its job is _____.”

“The two systems connect because _____.”

Proofread for science

Have I mixed up digestion and pumping?

Have I explained the link?

Does my arrow carry a small substance?

Museum quality check

Read or show one repaired statement.

Does it name a job and a system?

Improve one label after feedback.

Choose the next question

Which organ would help explain transport next?

Suggest one question about its job.

Leave a clear explanation

E1. Give the heart's job.

E2. Give one digestive organ and its job.

E3. Explain how the two systems connect.
