

The health evidence advisers

Teacher guide and worked answers

Explain how diet, activity, drugs and daily routines can affect the body using a fictional club plan.

40 minutes. Use Lesson.html for interactive teaching or Lesson.pptx for editable slides. Slides.pdf is the static alternative. Select one pupil response route and print the shared evidence it requires. Detailed answers below are for staff.

Scheme of work

_passsg/inputs/GROW SOW 2026-27.xlsx | GROW Weekly - Spring | B34:C34

Explain the impact of diet, exercise, drugs and lifestyle on the body (links PSHE).

Directly develops this stated outcome with secondary-age tasks at an upper-KS2 conceptual level. Support and stretch are flexible; this exemplar is not a claim of qualification approval.

Prior learning

Know that blood transports nutrients and oxygen.

Distinguish a claim from evidence.

Success evidence

Link a lifestyle factor to a body effect.

Explain that medicines can help when used as directed but also have risks.

Recommend an accessible plan without promising perfect health.

Equipment

Printed source and proposal cards, selected route, pencils.

Preparation

Read all fictional club constraints. Avoid discussion of pupils' weight, family habits, diagnoses or medicines.

No food tasting or movement trial is required; use desk planning.

Practical care

Do not ask pupils to disclose medication or advise anyone to stop or change prescribed medicine.

Use fictional profiles only. Follow existing school support procedures if a pupil voluntarily raises a personal concern.

All activities are paper-based; no smoke, alcohol, medicines or food samples are handled.

Ready to teach alternative

Use the supplied fictional club and short source cards. No personal records, exercise or internet access are needed.

Teaching sequence

Slide	Stage	Minutes	Focus
1	Opening	0-2	A club asks for scientific advice
2	Retrieval	2-5	Useful substances, useful evidence
3	I do	5-13	I connect a factor to a body effect
4	I do	Within stage	I explain an activity effect
5	I do	Within stage	I treat drug claims carefully
6	We do	13-21	The adviser board
7	We do	Within stage	Design for access
8	We do	Within stage	The exaggerated poster
9	Hinge	21-24	A medicine has possible side effects
10	You do	24-34	Write the club recommendation
11	You do	Within stage	Link, do not list
12	You do	Within stage	Check your wording
13	Review	34-38	Evidence before a slogan
14	Review	Within stage	Which access change should we show?
15	Exit	38-40	Three responsible science statements

Times are a suggested 40-minute route. Slides marked Within stage share the preceding stage allocation. The optional HTML timer starts only when selected.

1 Opening A club asks for scientific advice

Explain there is no pupil health questionnaire. Pupils advise the imaginary club, not themselves or classmates.

2 Retrieval Useful substances, useful evidence

R1 blood; R2 carbohydrate, protein, fat, vitamins, minerals or water. R3 no. Do not classify individual foods as good or bad.

3 I do I connect a factor to a body effect

Think aloud: I use “varied pattern” because bodies need different substances. Food access, allergies and culture matter. The diagram gives selected examples; foods contain mixtures of nutrients, and individual needs vary.

4 I do I explain an activity effect

Shared I do time. Distinguish an immediate response from longer-term support. Say can support, not guarantees health or proves fitness. Movement may be seated, wheeled or otherwise adapted; this lesson requires none.

5 I do I treat drug claims carefully

Shared I do time. Model: "All drugs are bad" is too broad. Medicines can help treat a condition when used as directed. A lesson cannot tell someone to stop treatment. Smoke and harmful alcohol use have risks; discussing risks does not judge people.

6 We do The adviser board

P/Q/R can be kept with access conditions; S reject as unsafe unqualified advice. Cards supply all facts. Invite teams or private written adjudication.

7 We do Design for access

Shared We do time. P+Q, P+R or Q+R can all work if justified. Example P+Q: varied nutrients plus suitable movement; allergy-aware cards and quiet/seated options. There is no single healthiest person or compulsory activity.

8 We do The exaggerated poster

Shared We do time. Model after pupils: Our varied, accessible plan can support health, but many influences affect illness and no plan guarantees nobody becomes ill. No blame for illness.

Reveal: This plan can support health. It cannot guarantee an individual outcome.

9 Hinge A medicine has possible side effects

A unsafe and overgeneralised. B correct. C falsely guarantees no risk. Revisit benefits/directions/side effects diagram.

A. Everyone should stop taking it. - A class cannot direct someone to stop treatment. Ask a pharmacist or prescriber.

B. It may help when used as directed; ask a professional about concerns. - This recognises intended benefits, directions and possible risks.

C. If it is a medicine, it can never cause harm. - Medicines can have side effects and incorrect use can cause harm.

10 You do Write the club recommendation

10 minutes across You do. All routes cover diet, activity and drug/routine effects. A dictated recommendation is valid.

11 You do Link, do not list

Shared time. Ask for a specific physiological or functional effect rather than "it is healthy" alone.

12 You do Check your wording

Shared time. No calorie targets, body measurements or weight goals. Replace guarantees with bounded claims.

13 Review Evidence before a slogan

4 minutes across Review. Evidence can be spoken privately. Separate a source supporting a broad health relation from proof of an individual outcome.

14 Review Which access change should we show?

Lundy: teacher adopts a justified accessible option and explains how pupils' input changed the plan. No vote about whose body or lifestyle is better.

15 Exit Three responsible science statements

Diet supplies different nutrients; activity can support heart/muscles/bones or increase oxygen delivery during movement; take medicines as directed and ask professional about concerns. E4 on page: can support does not guarantee.

Answers and assessment

R1-R3

Blood; an appropriate nutrient or water; no, can help is not certainty.

W1-W3

W1 keep/adapt P, Q and R using A/B/C/E/F; reject S using D. W2 accept any two useful proposals with accurate body links and an access adjustment such as allergy-aware choices, seated/wheeled options or quiet participation. W3 replace guarantee with can support health; many factors affect illness.

Hinge A-C

A incorrect: stopping everyone's medicine is not justified. B correct: follow directions and consult a pharmacist/prescriber about concerns. C incorrect: side effects and risks exist.

S1-S5

S1 varied pattern. S2 heart and muscles (bones also valid). S3 keep to directions/professional questions. S4 P nutrients and accessible choices, Q activity benefits and adaptation, or R rest/smoke exposure and quiet options. S5 guarantee that nobody becomes ill.

N1-N4

N1 diet supplies nutrients/A; activity supports heart/muscle/bone/B; tobacco smoke/harmful alcohol can damage systems or increase disease risk/C; medicine can help treat conditions but directions/side effects matter/D. N2 any justified P-R pair and access adjustment. N3 unqualified blanket treatment change could cause harm. N4 calm routine/rest may support functioning; plan cannot guarantee no illness.

T1-T4

T1 accurate factor/effect links: e.g. during activity muscles need more oxygen and heart usually speeds up; regular suitable activity supports health over time. Tobacco/alcohol risk is not certainty. T2 scientifically justified combination with two distinct access adjustments. T3 medicines are drugs with possible benefits and unwanted effects. T4 a single session cannot establish long-term outcomes or remove all causes of illness; "the plan can support health and access" is defensible.

E1-E4 / reflection

E1 varied diet supplies different nutrients. E2 suitable activity supports body systems or immediate increased oxygen delivery. E3 use as directed; consult pharmacist/prescriber about concerns. E4 support changes chances or functioning, not a guaranteed individual outcome. Reflection: accept a reasoned access change.

Assessment and re-teach

Secure: explains at least one diet link, one activity link and one drug effect/precaution, with an inclusive bounded recommendation. Re-teach vague healthy labels by completing factor → body effect. Correct moral judgement, guarantee claims and treatment-change advice immediately and calmly.

Teaching and assessment notes

40 minutes: opening 2; retrieval 3; I do 8; We do 8; hinge 3; You do 10; review 4; exit 2. Zero-minute slides share their stage time.

Supply shared page 1, one selected route page 2, 3 or 4, and page 5. Do not require all three routes. An independent spoken explanation can be recorded verbatim by an adult.

All profiles and proposals are fictional. Health is affected by social conditions, environment and chance as well as actions; illness must not be framed as moral failure.

Use drug as a scientific category including medicines. Avoid named recreational drug effects, doses or personal questioning; the taught scope is broad body effects and responsible evidence.

Interactive We do: pupils predict, test the diagram and explain. Paper equivalent is W1-W3 with source cards; it reaches the same decisions without animation.

Access and responsive teaching

Supported

Match factor and effect; select a plan using sentence frames.

Standard

Evaluate proposals and justify two linked changes.

Stretch

Repair overclaims and balance evidence with access constraints.

Regulation

Offer quiet pointing, private writing, drawing or adult scribing. Pass-and-return for public questions. Use fictional cases; no personal medical disclosure or comparison of bodies. Assign response routes from current evidence, not fixed pupil labels.

Misconceptions to check

One food or activity guarantees health.

Health has many influences; an action can support health without guaranteeing an outcome.

Check: Ask whether a risk statement predicts every individual.

All drugs are harmful and medicines should be stopped.

Medicines can treat conditions when used as directed; they can also have side effects.

Check: Ask who should advise about medicine use.

Everyone can use exactly the same activity plan.

Access, abilities, health needs and enjoyment differ; activity can be adapted.

Check: Ask how to make a club option accessible.

Word	Meaning
diet	The overall pattern of food and drink a person has.
physical activity	Body movement that uses energy; many activities can be adapted.
drug	A substance that changes how the body works; medicines are examples.
risk	The chance that something may happen, not a guarantee.
evidence	Information used to support or challenge an explanation.

Scientific references

NHS: The Eatwell Guide

Checked September 2026. Varied eating patterns and different food groups; no food scoring, calorie prescription or individual diet plan.

NHS: Physical activity for children and young people

Checked September 2026. Accessible activity supports health; no compulsory exercise or pupil fitness assessment.

WHO: Noncommunicable diseases

Checked September 2026. Tobacco smoke, alcohol and other influences affect disease risk, not individual certainty or blame.

NHS: Medicines A to Z

Checked September 2026. Medicine information includes purpose, correct use and side effects. This lesson gives no medicine changes or dosage advice.

NHS: Sleep and tiredness

Checked September 2026. Sleep supports functioning; fictional routine design, no personal sleep data.
