Knowledge organiser (BASE) — The local canvas: shapes and textures

Pathway: BASE · Week 1 Part 2 · Big question: What bold shapes and rough marks can we spot in big frames?

Core studio focus

Family: Studio suite

Big question: What bold shapes and rough marks can we spot in big frames?

- Spot straight bars, arches, and triangles on photo cards.
- Make two wax rubbings over bumpy card plates.
- Draw one strong frame shape with thick black lines.

Essential vocabulary

- beam: A long straight bar that holds up a frame.
- arch: A curved shape that goes across a gap.
- rough: Bumpy to touch, not flat or smooth.
- rubbing: Marks made by pressing wax over a bumpy card.
- edge: The outside line where a shape stops.

Three-step studio method

Step 1: Spot the big shapes: I trace a photo card with my finger to find one arch. Two bars.

Step 2: Make a wax rubbing: I put a bumpy plate under my page. Rub a flat crayon over it.

Step 3: Draw bold bars on top: I use a thick black pen to draw straight bars over the wax mark set.
