TA studio brief — Makers, tools and visual links

Pathway: BASE · Week 2 Part 2 · Big question: How do makers use layered card shapes to build bold relief art?

TA practical setup & focus

Have pre-cut card strips in two widths ready in trays and supervise scissor use.

Studio kit: Thick greyboard bases, ridged card strips, smooth card offcuts, PVA glue spreaders, charcoal sticks

Key words to prompt

- relief: Art where raised shapes stick up from a flat base.
- layer: One piece of card glued on top of another piece.
- base: The flat stiff board at the bottom of your work.
- maker: A person who plans and builds artwork by hand.
- join: Where two pieces of card meet and stick fast.

Supported route steps

1. Pick a stiff base board. Four pre-cut card beams.
2. Arrange your beams into a bridge or tower shape. First gluing.
3. Spread a thin layer of glue. Press the two main beams down.

4. Glue two ridged strips across the top to make a raised layer.

Check: Two layers of card strips glued firmly into a frame.

Review & exit support

Exit question: What do we call flat artwork where raised shapes stick up from the base?

Staff note: Staff preparation only: review a short clip on constructing a three-layer cardboard relief plate.
