Tier pack: Aspire route — Test, check and adjust the panel

Pathway: BASE · Week 5 Part 2 · Big question: How can we test our relief panel layout and make one part stronger?

Aspire route studio steps

Step 1: Assemble all three relief layers dry on your board. Check from across the room.

Step 2: Adjust spacing. Overlaps so the focal arch or tower leads the eye cleanly.

Step 3: Bond layers 1. 2. Then test where chrome and rust dry-brushing will lift the edges.

Step 4: Write a short note on the back of your plan naming what you changed. Why.

Success check

Three-layer frame tested, refined, bonded, and labelled.

Make-it studio planner

Pick your check focus and the change you will make on your panel.

Options: Widen beam spacing, Raise the centre arch, Straighten side tall bars, Lock slanted struts

Review checklist

[ ] Prop your glued board up. Step back two paces again.

[ ] Point to the exact part you moved or brightened today.

[ ] Make sure your panel lays flat on the drying rack.
