Pupil studio resources & worksheet — Resolve and finish the relief artwork

Pathway: BASE · Week 6 Part 2 · Big question: How do we add top details and a neat border to finish our relief panel?

Arrival check

Touch the corners of your Week 5 panel. Are all the main beams stuck down tight?

[ ] Yes, Layer 1 and Layer 2 are firm and dry

[ ] One corner is lifting up a bit

[ ] It is ready for top bolt dots and chrome dry brush

Starter visual cues

Touch 1 (Layer 3): Glue small cross-braces. Round bolt dot dots on beam joints.

Touch 2 (Bright lines): Skim a chrome dry brush or white chalk along the top edges.

Touch 3 (Mount): Glue the whole board onto a clean backing frame.

No loose flaps or sticky glue blobs left showing.

Vote: Why do we wait until the very end to skim chrome bright lines over our raised card?

Studio practice planner

Pick your final Layer 3 detail, bright line finish, and border frame.

Shapes/Focus: Corner bolt dot rows, Slanted cross-braces, Keystone arch plate, Tower cap beam

Tools/Methods: Chrome dry-brush skim, White chalk top edge, Rust + chrome two-tone, Embossed foil trim

Exit ticket

Why do we add bright chrome or white chalk to the highest bumps last?

[ ] To catch the light on the raised edges and make the panel look 3D

[ ] To make the card wet and soggy

[ ] To cover up the backing frame
