Tier pack: Aspire route — The local canvas: architectural line and form

Pathway: TRACK · Week 1 Part 2 · Big question: How can we use structural line, negative space, and surface frottage to record built architecture?

Aspire route studio steps

Step 1: Prepare a layered tonal ground using graphite frottage and a pale ink wash.

Step 2: Construct a two-plane structural drawing showing near and far truss frames through negative-space mapping.

Step 3: Use hatched shadow under the deck and white chalk highlights on top flanges.

Step 4: Annotate how line weight and overlap establish spatial depth.

Success check

Two-plane architectural study with tonal depth, chalk highlights, and spatial notes.

Make-it studio planner

Select your structural focus, texture ground, and line-weight strategy.

Options: Triangulated truss bridge, Twin suspension towers, Arched steel viaduct, Cantilever crane frame

Review checklist

[ ] Check that the triangle sky gaps (negative spaces) match the angles on your reference card.

[ ] Verify that your nearest beams have the thickest, darkest lines.

[ ] Ensure your three technical labels point cleanly to the matching features.
