Tier pack: Aspire route — Studio skills and safe workshop practice

Pathway: TRACK · Week 2 Part 2 · Big question: How do we score, cut, and laminate heavy card safely to build rigid architectural relief?

Aspire route studio steps

Step 1: Measure and cut precision girder strips in three graduated widths.

Step 2: Engineer an overlapping cantilever or arch span using laminated beams, gusset plates, and raised rivet strips.

Step 3: Apply a two-stage weathered finish (dark iron base plus dry-brushed oxide and chrome).

Step 4: Annotate your log explaining how lamination depth changed shadow contrast.

Success check

Graduated three-level relief span with weathered finish and technical annotation.

Make-it studio planner

Select your structural join, relief profile, and surface primer.

Options: Laminated double beam, Triangle gusset joint, Overlapped lattice truss, Riveted arch crown

Review checklist

[ ] Check that all tools are docked safely in the central table block and counted.

[ ] Tilt your primed relief panel toward the light to inspect the depth of your laminated beams.

[ ] Place your board flat on the drying rack.
